Intel CISD, or the Channel Innovation and Solutions Division, develops innovative products, not just the building blocks Intel is known for. CISD has given the world the Intel[®] NUC, a Mini PC that's about 4-inches square, and the Intel[®] Compute Stick, a tiny PC that can fit in the palm of your hand. Now we've created the smallest, most amazing device yet: the Intel[®] Compute Card.

TRANSFORMING COMPUTING

With Intel® brand processors and everything you need already built-in, the Intel® Compute Card is the new compute standard for smart devices and gives you the power of a PC in a system about the size of a credit card. The truly amazing thing is that this tiny device has a universal interface which allows it to be plugged into any host device with an Intel Compute Card slot—and that makes it easy to integrate compute and connectivity into everything.

By simplifying the integration of compute and connectivity through a universal interface, OEMs and manufacturers can easily create devices that bring **COMPUTING POWER** to **UNEXPECTED PLACES**, without needing to know how to build compute power into their products.
