Before You Begin

This section provides you with safety information, technical support information, and sources for additional product information.

Safety Information

Your safety is extremely important. Read and follow all warnings and cautions in this document before handling and operating Intermec equipment. You can be seriously injured, and equipment and data can be damaged if you do not follow the safety warnings and cautions.

This section explains how to identify and understand warnings, cautions, and notes that are in this document.

A warning alerts you of an operating procedure, practice, condition, or statement that must be strictly observed to avoid death or serious injury to the persons working on the equipment.

A caution alerts you to an operating procedure, practice, condition, or statement that must be strictly observed to prevent equipment damage or destruction, or corruption or loss of data.

Note: Notes either provide extra information about a topic or contain special instructions for handling a particular condition or set of circumstances.

Global Services and Support

Warranty Information

To understand the warranty for your Intermec product, visit the Intermec website at www.intermec.com and click **Support > Returns and Repairs > Warranty**.

Disclaimer of warranties: The sample code included in this document is presented for reference only. The code does not necessarily represent complete, tested programs. The code is provided “as is with all faults.” All warranties are expressly disclaimed, including the implied warranties of merchantability and fitness for a particular purpose.

Web Support

Visit the Intermec website at www.intermec.com to download our current manuals (in PDF).

Visit the Intermec technical knowledge base (Knowledge Central) at www.intermec.com and click **Support > Knowledge Central** to review technical information or to request technical support for your Intermec product.

Send Feedback

Your feedback is crucial to the continual improvement of our documentation. To provide feedback about this manual, please contact the Intermec Technical Communications department directly at TechnicalCommunications@intermec.com.

Telephone Support

In the U.S.A. and Canada, call **1-800-755-5505**.

Outside the U.S.A. and Canada, contact your local Intermec representative. To search for your local representative, from the Intermec website, click **About Us > Contact Us**.

Service Location Support

For the most current listing of service locations, click **Support > Returns and Repairs > Repair Locations**.

For technical support in South Korea, use the after service locations listed below:

AWOO Systems

102-1304 SK Ventium

522 Dangjung-dong

Gunpo-si, Gyeonggi-do Korea, South 435-776

Who Should Read This Manual

This manual is written for the person who is responsible for installing, configuring, and maintaining the CN50 Mobile Computer.

This manual provides you with information about the features of the CN50, and how to install, configure, operate, maintain, and troubleshoot it.

Before you work with the CN50, you should be familiar with your network and general networking terms, such as IP address.

About the Computer Features

This chapter introduces the CN50 Mobile Computer with the Windows[®] Embedded Handheld operating system. Use this chapter to learn about the basic features and functions of the CN50, as well as the available accessories for the CN50.

About the CN50 Mobile Computer

The Intermec CN50 Mobile Computer is a small, sleek, and stylish mobile computer built on the Microsoft® Windows Embedded Handheld operating system. The CN50 uses dual ARM processors to provide high throughput and is the first mobile computer with the latest High Speed Uplink Packet Access (HSUPA). The CN50 is also the first voice-enabled mobile computer that can be changed from a CDMA network to a GSM/UMTS network and back to CDMA.

CN50 Mobile Computer

What's New in This Release

This version of the user manual contains these updates:

- Updated information on the CN50 accessories. For more information, see **“CN50 Accessories” on page 5**.
- Added a procedure to select the language when you turn on the computer. For more information, see **“Turn On the CN50 for the First Time” on page 7**.
- Added information about the Intermec applications available on the CN50 mobile computer. For more information, see **“About Intermec Applications” on page 27**.
- Added information about the 5-megapixel color camera. For more information, see **“About the Color Camera” on page 48**.

- Updated information on the Intermec Settings menus. For more information, see **“About the Structure of Intermec Settings” on page 61.**
- Added information on the ScanNGo Wi-Fi configuration bar code. For more information see **“Enable the Wi-Fi Radio With ScanNGo Bar Codes” on page 68.**

Overview of the CN50 Features

The CN50 is available with the following features:

- 3.75G UMTS/3.5G CDMA, 802.11b/g CCX v4.0, and Bluetooth® radio
- 2.5 GPRS/EDGE radio
- 256 MB DRAM, 512 MB Flash (approximately 350 MB free for user applications)
- Customer-accessible micro-SD slot for removable memory cards up to 32 GB
- Imaging options:
 - EA21 area imager
 - EA11 area imager
- Integrated GPS receiver
- Digital compass to enhance GPS navigation and improve geotagging of captured images
- Accelerometer that can automatically sense the angle of the computer and rotate the display between portrait and landscape
- Camera:
 - 3-megapixel color camera
 - 5-megapixel color camera
- Area imager that can read bar codes, capture signatures, and support Enhanced Mobile Document Imaging (eMDI)

The CN50 Mobile Computer with an IEEE 802.11b/g radio installed is Wi-Fi® certified for interoperability with other 802.11b/g wireless LAN devices.

Use this manual to understand how to use the CN50 and other features and options available on it.

Note: For information about the Mobile applications installed on the CN50, see the online Help. For additional information, visit Intermec Knowledge Central at intermec.custhelp.com.

About the Status LEDs

The CN50 has four status LEDs.

Location of the CN50 Status LEDs

The next table describes the notification LED, Good Read LED, and key status LED. For information about the battery status LED, see “[About the Battery Status](#)” on page 9.

Understanding the Status LEDs

LED	Color	Description
Notification	Orange	The CN50 is notifying you of a pending alarm or message.
Good Read	Green	The CN50 has successfully decoded a bar code.
Battery		See “About the Battery” on page 7.
Key Status	Green	Caps Lock is enabled if you have a QWERTY keypad. Green function keys are enabled if you have a numeric keypad.
	Amber	Amber function keys are enabled.

CN50 Accessories

The CN50 ships with a battery. All other accessories are sold and ordered separately. For help, contact your local Intermec sales representative.

CN50 Accessories

Accessory	Description
CN50 AC Power Adapter (Model AE37)	The CN50 AC Power Adapter provides a connection for external AC power to the CN50. To use this adapter, you need to purchase a country-specific power cord.
CN50 Battery (Model AB25)	The AB25 extended battery provides power to the CN50.
CN50 Charge-Only Multidock (Model AD23)	Use the charge-only multidock to hold up to four mobile computers with batteries installed, charge batteries, and provide power to the mobile computers.
DX1 Desktop Dock with USB connectivity	Use the desktop dock with the: <ul style="list-style-type: none"> • computer cup to charge the battery while it is installed in the computer. • battery cup to charge the battery.

Accessory	Description
DX2 Dual Dock and DX4 Quad Dock. The DX2 and DX4 are available in charge-only and Ethernet configurations.	Use these charger bases with the: <ul style="list-style-type: none">• computer cup to charge batteries while they are installed in the computer.• battery cup to charge two batteries.
Ethernet Adapter	Use the Ethernet adapter to be able to connect the computer to an Ethernet network.
CN50 Ethernet Multidock (Model AD24)	Use the multidock to hold up to four mobile computers with batteries installed. The multidock charges the batteries and provides power and Ethernet connections to each mobile computer.
CN50 Handstrap Replacement	You can order and install a replacement handstrap.
CN50 Magnetic Stripe Reader (Model AR9)	Use the magnetic stripe reader if you need magnetic stripe reading capability on the mobile computer.
CN50 Quad Charger (Model AC21)	Use the quad battery charger to charge up to four battery packs.
CN50 RS-232 Adapter	Use the RS-232 adapter to convert the connector on the bottom of the computer to a serial connector.
CN50 Single Dock (Model AD27)	Use the single dock to hold a mobile computer with its battery installed, charge a spare battery pack, charge the main battery pack, and provide power to the mobile computer. The dock has USB host and client connectors. Optional modules are available to convert the USB host to Ethernet or to a landline modem.
CN50 Tethered Stylus Replacement	You can order and install a replacement stylus.
CN50 Vehicle Docks (Models AV6, AV9)	Use the vehicle docks to hold and charge the mobile computers while using them on a vehicle.
CN50 Vehicle Holder	Use the vehicle holder to hold your CN50 while you are using it in a vehicle.
CN50 Vehicle Power Adapter (Model AE36)	Use the vehicle power adapter to charge the battery installed the CN50 from your vehicle.

Turn On the CN50 for the First Time

If your mobile computer includes language provisioning, you are prompted to select a language and align the touch screen when the computer starts for the first time. Your language selection applies to text used in the Windows Mobile user interface and Microsoft applications.

Note: The available languages are Simplified Chinese, Traditional Chinese, French, German, Italian, Korean, Russian, and Spanish.

- 1 Insert the battery into the CN50.

The CN50 turns on, and you are prompted to select a language.

Note: You cannot change the language once it is loaded on your CN50. The only way to modify the language selection is to reload or update the firmware. For help, see [“Update the System Software” on page 94](#).

- 2 Use the , , and  keys to select a language and navigate through the screens.

The language you selected loads on the CN50.

- 3 Fully charge the battery.
- 4 When you are prompted, tap the screen to set up your CN50.
- 5 Follow the onscreen instructions to align the touch screen.

The home screen appears.

About the Battery

The CN50 uses an AB25 extended battery as its main power source. The extended battery has a 14.4 Watt hour capacity. Several factors determine the life of your battery, such as display brightness, display timeout, input devices, extreme temperatures, and your usage.

Fully charge the battery before you use the CN50. When you change the battery, the computer will automatically go into a power off state and then cold boot.

The battery used in this device may present a fire or chemical burn hazard if it is mistreated. Do not disassemble it, heat it above 100 °C (212 °F) or incinerate it. Dispose of used batteries promptly. Keep away from children.

If you remove the battery pack before turning off the CN50, the CN50 goes into a power off state and then cold boots. To preserve your data, tap Start and then tap Shutdown to turn off the CN50 before removing the battery.

Contact your Intermec representative for replacement batteries.

Charge the Battery

Make sure you fully charge the AB25 battery before you use your CN50. You can charge the battery before or after you install it in the CN50. A fully discharged battery charges in approximately 6 hours.

Use the next table to understand how long it takes to charge your battery in each of the CN50 charger or dock accessories.

Charging Times for CN50 Battery

CN50 Charging Accessory	AB25 Charging Time
AC21 quad battery charger	6 hours
AD23 charge-only multidock	6 hours
AD24 Ethernet multidock	6 hours
AD27 single dock charger	6 hours
AE36 vehicle power adapter	6 hours
AE37 AC adapter	6 hours
DX1, DX2, or DX4 dock	Up to 6 hours

The battery is fully charged when the battery status LED shows a steady green. For information on these accessories, see **“CN50 Accessories” on page 5**.

- Insert the battery into a quad battery charger, a single dock, or a multidock, or attach external power to the CN50 with the battery installed.

Change the Battery

The CN50 resets when you remove the battery.

- 1 Save your files and close any open applications.
- 2 Shut down the CN50 by tapping **Start > Shut Down**. For more information, see **“Warm Boot the Computer” on page 105**.
- 3 If necessary, disconnect the handstrap from the top of the CN50.

- 4 Push forward on the battery release tab until the battery releases, and then lift it away from the CN50.

- 5 Insert the bottom of a fully charged battery into the CN50, and press down on the top until it clicks into place.
- 6 If necessary, replace the handstrap.

About the Battery Status

Use the battery icon on the Title bar to see the power status of your battery.

Battery Icon Status

Icon	Status
	Battery is fully charged.
	Battery has a medium charge. You should be able to work for several more hours before changing batteries.
	Battery is low. You need to replace or charge the battery soon.
	Battery is critically low. You need to replace or charge the battery now.
	Battery is charging.

Use the battery status LED to see the charging status of your battery.

Location of the Battery Status LED

Understanding the Battery Status LED

LED State	Description
Steady green when the CN50 is connected to external power	The battery is fully charged.
Blinking red	The battery is low. CN50 goes into Suspend mode. Charge or replace the battery.
Steady red when the CN50 is connected to external power	The battery is charging.
Steady amber	There is a battery error. The battery may be outside the allowable charging temperature or you may need to replace the battery.

LED State	Description
Off	The CN50 is not on external power and the battery is operating normally.

About Battery Life and Conservation

Batteries are chemical devices. If the batteries are left for long periods of time outside the CN50, the batteries slowly discharge, eventually to zero. The battery chemistry resists normal degradation if stored in a charger, as opposed to leaving the battery in a discharged state. See the following table for tips to maximize the life of your battery.

Battery Conservation Tips

When You Want To:	Do This to Save Battery Power:
Operate the CN50 and the Low Battery status icon appears or the Battery light comes on.	Save your data and then go to Start > Shut Down . After the CN50 shuts down, remove the battery and insert another fully charged battery. Or, you can connect the CN50 to an external power source.
Stop using the CN50 for 5 minutes or longer.	Make sure the low battery icon is not on the screen and that the Battery light is not turned on. Press ⏻ to suspend the CN50.
Store the CN50 for more than a day.	If you are storing the CN50 for a few days, such as over the weekend, install the charged battery or attach the CN50 to a power source. If you are storing the CN50 for longer, remove and charge the battery, then store both the battery and the CN50 in a cool location. If the battery in storage is not used in several months, you should recharge the battery to keep it at its performance peak.
Store the battery outside the CN50.	Store the batteries in a charger connected to power.

About the Keypad

Use the following sections to understand how to use the keypad. For information on remapping the keypad, you can download the Device IDL Resource Kit from the Intermec website at www.intermec.com/idl.

The CN50 comes with either a numeric keypad or a QWERTY keypad. The QWERTY keypad is designed for applications that require primary input of alphabetic data. This keypad also provides special characters, numbers, symbols, and functions by pressing color-coded key sequences.

The numeric keypad is for applications that require mainly numeric data. This keypad also lets you enter special characters, including the alphabet, by pressing color-coded key sequences.

CN50 Numeric Keypad

CN50 QWERTY Keypad

About the Power Button

When you press and hold the **Power** button (⏻), you put the CN50 into suspend mode. In this lower power mode, the CN50 continues to supply power to all memory, but turns off power to most hardware such as the display. This power-saving feature is designed to prolong battery life.

Note: When the computer is in suspend mode, press the **Scan** button to resume use.

About the Color-Coded Keys

Each keypad provides color-coded keys to let you access additional characters, symbols, and functions printed on the keypad overlay. Once you understand how to use the color-coded keys and key sequences, you can access all of the additional features printed on the keypad overlay.

There are two color-coded modifier keys on the numeric keypad: the orange  key and the green  key. There is one orange  color-coded modifier key on the QWERTY keypad.

Using the Color-Coded Keys

When You Want To:	Press:	Example
Use an orange character or function printed above a key.	 key (LED turns on) and then the key with the character or function printed above it.	On the CN50 QWERTY keypad, press  and then  to select the  key.
Use a green character or function printed above a key.	 key (LED turns on) and then the key with the character or function printed above it.	On the CN50 numeric keypad, press  and then  to select the  function.
Lock the green key to stay on.	 once.	On the CN50 numeric keypad, press  once. The green LED turns on and stays on.
Lock the orange key to stay on.	 twice.	On the CN50 QWERTY keypad, press  twice. The orange LED turns on and stays on.
Unlock the green or orange key.	 or  once.	Press  or  once to unlock the key. The LED turns off.

Capitalize Characters

You can capitalize characters individually, or you can type all capital letters by enabling Caps Lock.

To capitalize a single character:

- On the QWERTY keypad, press the  key, and the character.
- On the numeric keypad, press the  key, and then the  key. Select the key with the letter you want to capitalize. Press  again to return to lowercase letters.

To enable Caps Lock:

- On the QWERTY keypad, press , then the  key. Press  again to disable the Caps Lock.
- On the numeric keypad, press  .

To disable Caps Lock:

- On the QWERTY keypad, press the  key again.
- On the numeric keypad, press  again.

For information on how to enter specific characters with keystrokes, see Appendix B, **“Keypads and Keystrokes” on page 121.**

Enter Characters on the Numeric Keypad

To enter letters on the numeric keypad, you need to press the  key and the number key as many times as necessary to access the letter you need since each number key has one to four letters or functions.

To type a lower case Z:

- Press     .

Configure the Screen Backlight

You can turn on the backlight to see the screen better, or you can turn off the backlight to help conserve battery power.

You can turn the screen backlight on and off using the keypad:

- For the numeric keypad, press  .
- For the QWERTY keypad, press .

By default, the CN50 goes into Screen Off mode when there is no activity on the computer. Screen Off mode turns off the backlight and display. Press a key or tap the screen to resume activity.

You can configure the backlight from the Start menu.

- 1** Tap **Start > Settings > System > Backlight > the Battery Power** tab.
- 2** With Turn off backlight if device is not used for checked, select the timeout value (30 seconds, or 1 to 5 minutes).

Adjust the Volume

You can adjust the computer volume for your needs and environment. The volume includes sounds you hear when you tap the screen or scan bar codes. You can set the volume to off, very low, low, medium, high, very high (default), or vibrate.

You can use the Volume application (available from the navigation bar) or the Volume buttons (on the side of the CN50) to change the volume of the computer.

Location of Volume Buttons on the CN50

- To adjust the volume with the Volume application:
 - a** Tap the Volume () icon at the top of the screen.
 - b** Use your stylus to adjust the volume slider, select **Vibrate**, or select **Off**.

- To adjust the volume with the Volume buttons:
 - Press the upper side button to increase the volume.
 - Press the lower side button to decrease the volume, set the volume to vibrate, or turn the volume off.

Insert a microSD Card

You can use a micro Secure Digital (SD) card to increase file storage and install software. The CN50 supports an optional 32 GB maximum capacity microSD™ card. The microSD card slot is located in the battery compartment.

- 1** Remove the battery. For help, see **“Change the Battery” on page 9**.
- 2** Swing the card access door clockwise to expose the SIM card and microSD card slots.

- 3** Insert the microSD card in the bottom slot and push in with the stylus (or similar tool) until it clicks into place.
- 4** Install the battery.
- 5** Press **Ⓜ** to turn on the CN50.

You should be able to navigate to the Storage Card folder and see the contents of the microSD card.

Transfer Files To and From Your PC

You can use Microsoft ActiveSync (Windows XP or earlier) or Windows Mobile Device Center (Windows Vista or Windows 7) to establish a connection between your CN50 and PC. After you connect to your PC, you can transfer files, synchronize files, remotely debug, and perform other device management activities. ActiveSync and Windows Mobile Device Center are free applications available from the Microsoft website at www.windowsmobile.com/getstarted.

To establish an ActiveSync partnership between your CN50 and PC, you need to physically connect your CN50 to your PC using these accessories:

- CN50 AC adapter
- USB to micro-USB cable

Using these accessories, you can transfer files to and from your PC.

- 1** Connect your CN50 to your PC.
- 2** Install Microsoft ActiveSync or Windows Mobile Device Center on your PC.

2

About the User Interface and Intermec Applications

Use this chapter to learn about the Windows® Embedded Handheld user interface and how to interact with the screen. You can also use this chapter to learn about the Intermec applications on your computer, as well as additional Intermec applications you can download.

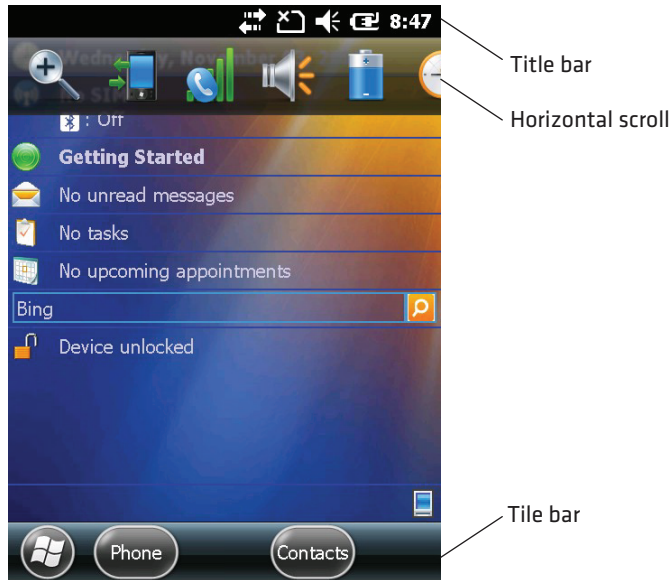

About the User Interface

The user interface for the Windows® Embedded Handheld 6.5 operating system is different from previous versions of Windows. The interface is touch-friendly and easier to navigate. Use the following sections to understand how to interact with Windows Embedded Handheld 6.5.

About the Home Screen

When you turn on your mobile computer, the Home screen appears. The Home screen contains three navigation bars: the Title bar, the horizontal scroll, and the Tile bar. To view the horizontal scroll, tap the Title bar.

The Windows Embedded Handheld 6.5 Home Screen

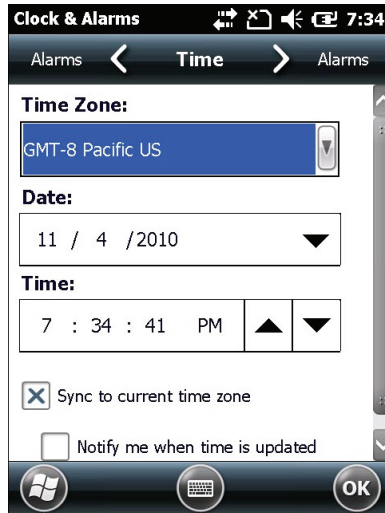

Use the Title bar icons to view the current status of information, such as signal strength and battery power remaining. For more information on the Title bar icons, see **“Title Bar Status Icons” on page 22**.

A horizontal scroll appears when you tap an icon in the Title bar. This horizontal scroll makes it easy to access the applications associated with the Tile bar icons. The horizontal scroll also contains a magnifier which improves the touch experience by making parts of the screen large enough to access with your finger.

The horizontal scroll also replaces tabs within Windows screens and allows for easier navigation.

Clock & Alarms Screen With Horizontal Scroll

Use the Tile bar to navigate between screens and within applications. The icons available on the Tile bar change depending on the application you are using.

Interact With the Screen

The Windows Embedded Handheld 6.5 interface supports the use of gestures with your finger or stylus to move around the screen.

Supported Gestures

Gesture	Description
Tap	Represents the left click of a mouse.
Double-tap	Represents the left double-click of a mouse.
Hold	Represents the right click of a mouse when you press and hold on the screen and a context menu appears.

Gesture	Description
Flick	Initiates scrolling in the direction (horizontal or vertical) the finger or stylus moves across the screen.
Pan	Press and hold on the screen and then drag in any direction.

Title Bar Status Icons

Clickable icons in the Title bar immediately show you the status of your network, your phone, the volume, the battery, and the time. Use the following table to understand what the icons mean.

Title Bar Status Icon Descriptions

Icon	Description
	You have a new notification.
	You have a new text message.
	You have a new email message.
	You have a new instant message.
	You missed a call.
	The speakerphone is on.
	The phone is roaming.
	An alarm is set.
	The microphone is on.
	An internet call is in progress.
	A Bluetooth headset is detected.
	An ActiveSync connection has been established.

Icon	Description
	There was a problem with the ActiveSync synchronization.
	An ActiveSync synchronization is in progress over USB.
	A CDMA connection is active.
	A CDMA connection is not available.
	A UMTS network is available.
	Connecting to a UMTS network.
	A UMTS connection is active.
	A 3G+ network is available.
	An EDGE network is available.
	Connecting to an EDGE network.
	An EDGE connection is active.
	A GPRS network is available.
	Connecting to a GPRS network.
	A GPRS connection is active.
	An HSDPA network is available.
	Connecting to an HSDPA network.
	An HSDPA connection is active.
	Bluetooth is on.
	Wi-Fi is on but not connected, and no networks are detected.

Icon	Description
	Wi-Fi is not connected to a network, and other networks are detected.
	Other wireless networks are detected.
	Connected to a wireless network.
	Synchronizing through a Wi-Fi connection.
	Connected to a wireless network, and other networks are detected.
	Information about a new wireless network is available.
	A network connection is active.
	A network connection is inactive.
	The phone has maximum signal strength.
	The phone has no signal.
	The phone capability is off.
	The phone has no service.
	The phone is searching for service.
	Data is being transferred.
	A voice call is in progress.
	A voice call in on hold.
	There is no SIM card present in the computer.
	The volume is off and the phone is set to vibrate.
	The volume is on.

Icon	Description
	The volume is off.
	The battery has a full charge.
	The battery has a high charge.
	The battery has a medium charge.
	The battery has a low charge.
	The battery has a very low charge.
	The battery is attached to external power and is charging.
	No battery is installed in the computer.
	Call forwarding is on.
	Voice mail is off.
	GPS locator is off.
	GPS locator is on.

Align the Screen Using the Stylus

If the touch screen does not respond when you tap it, you may need to align the screen.

Note: If the touch screen is so out of alignment that you cannot open the Start menu, you can try to align the screen menu using the keypad. For help, see the next section.

- 1 Tap **Start > Settings > Systems > Screen**.
- 2 Tap **Align Screen** and follow the instructions to align the screen.
- 3 Tap **OK**.

Align the Screen Using the Keypad

If the touch screen is so out of alignment that you cannot open the **Start** menu, you may need to align the screen menu using only the keypad, or as a last resort you can perform a clean boot. For more information about performing a clean boot, see “**Clean Boot the Computer**” on page 106.

- 1 Press   (for the Start menu .
- 2 Press  to select **Settings** and then press .
- 3 Press  until the Personal tab is selected.
- 4 Press   to select the System tab.
- 5 Use the arrow keys to choose **Screen**, and then press .
- 6 Tab to **Align Screen** and press .
- 7 Follow the instructions to align the screen.
- 8 Tap **OK**.

Rotate the Screen

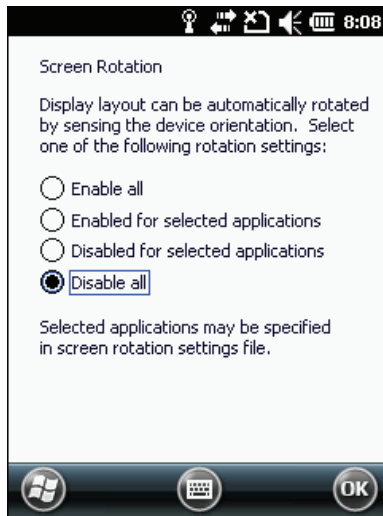

The internal accelerometer enables you to have the screen rotate by sensing the orientation of the CN50. You can enable the screen to rotate all the time depending on orientation, you can enable it to rotate for specific applications, you can disable rotation for selected applications, or you can disable it.

You can modify the screen rotation settings file to determine which applications will enable or disable screen rotation by modifying the settings.csv file in the \Windows folder.

Note: By default, when you select **Enabled for selected applications**, rotation is only enabled for Internet Explorer and Windows Media Player.

- 1 Tap Start > Settings > Systems > Sensors.**

- 2 Select the rotation option.**
- 3 Tap OK.**

About Intermec Applications

Intermec provides many useful applications to help you configure, troubleshoot, and connect your computer to other devices and networks. You can also download additional applications from Intermec to help you use all of the features available for your mobile computer.

Applications Available on the Mobile Computer

Use the following table to understand some of the Intermec applications available on your computer.

Intermec Applications Available on the Mobile Computer

Icon	Application	Description
	Intermec Settings	Use Intermec Settings to configure your computer. You can use Intermec Settings to individually configure a computer or you can use it through SmartSystems to configure all of your computers. For more information, see “Use Intermec Settings On the Computer” on page 60.
	Profile Settings	Use Profile Settings to easily configure the computer for a specific use. You can choose predefined values for the Power and Scanning. To apply a profile setting, tap the Profile Setting you want to use. A message indicating that the changes are saved and a check mark appears next to your choice. You can choose which Profile Settings to display using Intermec Settings. For help, see “Configure Profile Settings With Intermec Settings” on page 65.
	Wireless Center	Use the Wireless Center to turn radios (Wi-Fi, Bluetooth, phone) on and off and configure settings for each radio.
	Wireless Scanning	Use the Wireless Scanning application to connect to a Bluetooth scanner. For more information, see “Connect to a Bluetooth Scanner” on page 70.
	Wireless Printing	Use the Wireless Printing application to connect to a Bluetooth printer. For more information, see “Connect to a Bluetooth Printer” on page 71.

Applications You Can Download to the Mobile Computer

You can download several Intermec applications to extend the capabilities of your CN50. After the evaluation period, some applications require a license. For more information, contact your local Intermec representative.

View Available Applications

- 1 On the Intermec website, select **Products > Computers > Handheld Computers > CN50**.
- 2 Click the **Downloads** tab.

The available applications appear in the Applications table.

About SmartSystems Foundation

SmartSystems™ Foundation is an easy-to-use software platform that provides IT Administrators and Integrators a single, integrated portal for hands-free provisioning, deployment, and management of Intermec devices minimizing the effort spent on software upgrades, equipment monitoring, maintenance and troubleshooting.

SmartSystems Foundation provides a consistent way to manage Intermec devices, including mobile computers, RFID readers, printers and bar code scanners. Devices may be on-site or remote.

SmartSystems Foundation makes the most of limited IT resources, and lowers the total cost of ownership for Intermec data collection equipment. SmartSystems Foundation can be downloaded, at no charge from the Intermec website. For more information, visit www.intermec.com/SmartSystems.

About Features Demo

Intermec Features Demo provides a simple way to explore the key features of your mobile computer. Features Demo contains applications that demonstrate scanning, document imaging, image capture, printing, and GPS functionality. Many of the applications that are part of Features Demo also have separate, full-featured versions that you can download and license for your computer.

About Intermec Launcher

Intermec Launcher 2.0 is a Microsoft Windows application, designed for Intermec mobile computers, that provides a platform from which other applications may be launched while attempting to provide a locked-down environment. You can configure Intermec Launcher for your specific application requirements. You can download and use Intermec Launcher for a 60-day evaluation period. After the evaluation period expires, you need to purchase a license.

About Intermec Browser

Intermec Browser is a locked-down web application for your computer that is compatible with Microsoft Internet Explorer. You can configure Intermec Browser for your specific application requirements and design your own web pages. You can download and use Intermec Browser for a 60-day evaluation period. After the evaluation period expires, you need to purchase a license.

About Intermec Connection Manager

Intermec Connection Manager is a software application and API interface that provides seamless network roaming for Intermec mobile computers configured with one or more wired or wireless technologies (Ethernet, 802.11, GPRS, CDMA). Intermec Connection Manager works in the background to automatically establish and maintain connections. You can download and use Intermec Connection Manager for a 60-day evaluation period. After the evaluation period expires, you need to purchase a license.

About Intermec Terminal Emulator

Intermec Terminal Emulator (ITE), part of Intermec Client Pack (ICP), is the next generation of Intermec's popular terminal emulation client designed for enterprise-level data collection. It provides a consistent user interface and a common menu structure to simplify the use and management of applications running on Intermec mobile and wireless computers.

ITE contains enhancements that improve productivity, reduce errors, and deliver fast return on investment. It supports multiple emulation protocols in a single client and has new features such as session persistence, remote management and configuration, and offers a maintenance plan to keep you up-to-date with the latest releases and upgrades. You can download and use ITE for a 60-day evaluation period. After the evaluation period expires, you will need to purchase a license and maintenance plan.

About SIP Designer

The Soft Input Panel (SIP) Designer application lets you create and download custom SIP keyboards to your mobile computer.

3

Use the Phone

You can use the cell phone to send and receive telephone calls, as well as transmit data through cellular wide-area networks (WANs).

About the Phone

The CN50 supports two types of mobile wireless phone technology:

- CDMA
- UMTS

With the radio module installed in the CN50, you can send and receive telephone calls as well as transmit data through wide-area (WAN) cellular networks.

The CN50 provides a phone speaker, microphone, and speakerphone. It also supports Bluetooth headsets or hands-free kits. The factory default setting for the phone is disabled.

After you activate the phone with the wireless carrier of your choice, you can customize the features of the phone and network settings. For help, refer to the online help on your CN50.

Activate the CDMA Phone

The CDMA WWAN radio module is configured at the factory. To activate your CDMA CN50 device, you need to contact the carrier you have chosen and set up accounts for each device. Use the following table to view the carriers that Intermec currently supports. If your carrier is not listed in the table, please contact Intermec product support to see if it is now supported.

Currently Supported Carriers

Country	Carrier
United States	Sprint, Verizon

The carrier will require the Mobile Equipment Identifier (MEID) to start the activation process. You can find the MEID:

- on a label located in the upper right corner of the battery compartment.
- on the outside of the CN50 shipping box.

The activation process is slightly different for each CDMA carrier. Your carrier sales contact and an Intermec representative can guide you through the process.

After you supply the MEID to your carrier, they will respond with values that you must enter using the Windows Mobile Activation Wizard (if required). Some of the supported carriers do not require you to enter any values. The following table shows the carriers, the correct activation method to use, and the values that you need to activate your phone (if required).

Values Required for CDMA Phone

Carrier	Activation Method	Activation Values You Need
Sprint	Sprint Hands Free	MEID
Verizon	<ul style="list-style-type: none"> • Dial *22899 • Activation Wizard 	None. All parameters are automatically transferred wirelessly.

After you complete the activation process, the settings you enter are permanently stored in the CDMA module. Changing the OS will not affect any of the settings or activation parameters stored in the WAN modem.

Note: After you complete the activation process with your carrier, you can change your carrier selection using the Firmware Management Tool (FMT). To download the FMT, go to www.intermec.com > **Products > Computers > Handheld Computers > CN50 > Downloads** tab.

Start the Activation Wizard

- 1** Tap **Start > Phone**.
- 2** In the Phone application, tap **Menu > Activation Wizard**.

Activate the Computer on Sprint

Use the following procedure to activate a CN50 programmed for Sprint. Before activating the CN50, you need to set the local date and time.

Note: The CN50 must be activated within 24 hours of contacting Sprint with the MEID.

- 1 In a strong signal area, turn on or reboot the CN50 to automatically start the Hands Free Activation wizard.
- 2 If activation is unsuccessful on the first attempt, the wizard counts down from 60 seconds and tries again. It continues this process four times. At this point, you can reboot the CN50 to retry activation or contact Intermec Support.

Note: You can stop the activation process at any time by tapping **Cancel**. The wizard starts the process again the next time you boot up the CN50.

- 3 The wizard states when the activation is successful. You can test the service by navigating to a website or making a phone call.

Activate the Computer on Verizon

Use the following procedures to activate a CN50 programmed for Verizon. The voice service must be activated before you can activate the data service.

Activate the Voice Service for Verizon

- 1 Dial ***228** to initialize the Verizon programming.
- 2 Dial **1** when prompted to complete the process.

This will activate the voice service on the CN50 and program the phone number into the cell phone. A status message appears when the programming is successful.

- 3 Close the status message. The phone resets.

Activate the Data Service for Verizon

- 1 Tap **Start > Connections > Connection** icon.
- 2 Tap **Manage existing connections**.
- 3 Select the **InternetPPP #777** and choose **Edit**.
- 4 Confirm the Connection name is correct and tap **Next**.

- 5** In the **Enter the Number to dial** box, enter **#777** and tap **Next**.
- 6** Enter your username: <10_digit_#>@vzw3g.com.
Where <10_digit_#> is your actual 10 digit phone number. For example, 8005551212@vzw3g.com. To determine your phone number, go to the phone application and tap **Menu > Options**.
- 7** Enter the password: **vzw** (case-sensitive).
- 8** Tap **Finish**.
You can test the data service by navigating to a website using Internet Explorer.

Activate the UMTS Phone

Use a SIM card to activate the UMTS/HSPA phone on the CN50. You can purchase the SIM card from your network provider. Insert the SIM card in the battery cavity on the back of the CN50.

- 1** Press **Ⓜ** to turn off the CN50.
- 2** Disconnect the handstrap from the top of the CN50.
- 3** Push forward on the battery release tab until the battery releases.
- 4** Lift the battery away from the CN50.

- 5 Swing the card access door clockwise to expose the SIM card and microSD card slots.

- 6 Insert the SIM card into the top slot until it clicks in place.
- 7 Close the card access door.
- 8 Insert the battery and press down until it clicks in place.
- 9 Reconnect the handstrap.
- 10 Press **Ⓚ** to turn on the CN50.

Turn the Phone On and Off

Before you can start using your phone, you need to enable it. Use Wireless Center to enable and disable your phone, as well Bluetooth and Wi-Fi communications.

- 1 Tap **Start** > **Settings** > **Connections** > **Wireless Center**.
- 2 Tap **Phone** to turn on the Phone.
- 3 (Optional) To configure the phone, tap **Menu** in the tile bar at the bottom of the screen.
- 4 Tap **OK** when you are done configuring the options.
- 5 Tap **OK** to close Wireless Center.

Make a Phone Call

After you activate your phone, you are ready to start making phone calls. The icon in the navigation bar changes to indicate that the phone is now active.

- 1** Tap **Start > Phone**.
- 2** Tap the keys to enter the telephone number you want to call.
- 3** Tap the **Talk** button.

Make an Emergency Phone Call

If the SIM card is not installed, the phone indicates that you have no service. However, you can make an emergency phone call even if the SIM card is missing.

- 1** Tap **Start > Phone**.
- 2** Dial an emergency number, such as 112, 911, 000, 08, 118, 119, or 999.
- 3** Tap **Talk**.

The call goes through to the appropriate emergency service.

4

Use the Imager

You can use the imager to read bar codes and capture signatures. You can also configure the imager to meet your specific data collection and environmental needs.

About the Imager

The CN50 has two available area imagers, the EA11 and EA21. The next table shows the minimum bar code size supported by each imager.

Minimum Bar Code Sizes

Imager	1D	2D
EA11	5 mil	5 mil
EA21	6 mil	10 mil

The area imagers can perform these tasks:

- Capture signatures. Use the imager to “photograph” signatures on business forms, or to capture onscreen signatures or line drawings. For more information, see **“About Signature Capture”**.
- (EA21 only) Perform document imaging of full business forms such as bills of lading or invoices. For more information, see **“About Document Imaging” on page 43**.
- Read bar codes, including 1D, 2D, composite symbologies, and postal codes. For more information, see **“About Bar Codes” on page 43**.

About Signature Capture

A signature capture is a grayscale image of a signature on paper or other business forms. To use signature capture in your applications, use the SignatureCapture components in the Data Collection Resource Kit.

Ink capture is the process of saving an onscreen image, such as a signature or simple line drawing, to a file. To use ink capture in your applications, use the InkCapture components in the Mobile Gadgets Resource Kit.

Both Resource Kits are part of the Intermec Developer Library (IDL), which you can download from the Intermec website at www.intermec.com/idl.

About Document Imaging

Intermec Enhanced Mobile Document Imaging (eMDI) is an image capture application that enables users to capture document images while in the field. This application is only supported on the CN50 with the EA21 imager. Using the CN50, eMDI allows you to convert paper documents into document images that are saved on your mobile computer.

eMDI streamlines back-office operation and reduces data entry time because document images can be transmitted from the field to backoffice applications over wireless networks. With this, customer service and other staff gain real-time access to document images, via their enterprise systems, which can be used to answer customer queries, issue invoices, and update records.

You can download a full version of eMDI from the CN50 page on the Intermec website at www.intermec.com. The eMDI application will place an “Intermec Demo” watermark on the captured documents until you purchase the eMDI Client Software License (P/N 454-025-001). For more information, contact your local Intermec representative. For more information on eMDI, see the *Intermec Enhanced Mobile Document Imaging User’s Guide*.

About Bar Codes

The CN50 ships with an internal imager to read and enter bar code data. By default, these bar code symbologies are enabled on the CN50:

- Code 39
- Code 128/GS1-128
- DataMatrix
- EAN/UPC
- PDF417

If you are using bar code labels that are encoded in a different symbology, you need to enable the symbology on the CN50. To easily enable or disable symbologies, read one of the bar codes in the table called “**Symbology Bar Codes**” on page 129.

You can use EasySet to create configuration bar codes specific to your system. You can download a free copy of EasySet from the CN50 page on the Intermec website at www.intermec.com.

Read Bar Codes

- 1 Press **Ⓚ** to turn on the CN50.
- 2 Point the scanner window at the bar code label, and hold the CN50 steady a few inches from the label.
- 3 Press the **Scan** button. The laser pointer and illumination beam and frame appear.

- 4 Use the laser pointer as a guide and aim toward the middle of the bar code. Make sure that the illumination frame covers the bar code you are trying to decode.

When the CN50 successfully reads a bar code label, you hear a high beep, and the Good Read LED turns on briefly.

- 5 Release the **Scan** button.

To develop an application you can use to configure the imager, use the Data Collection Resource Kit. The resource kit is part of the Intermec Developer Library (IDL) and can be downloaded from the Intermec website at www.intermec.com/idl.

The area imager is equipped with a laser pointer to help you aim at bar codes, allow you to read 2D bar code symbologies, and support omni-directional (360°) scanning. Omni-directional scanning lets you position the CN50 in any orientation to read a bar code label.

5

Use the Camera

You can use the color camera to take pictures and record videos.

About the Color Camera

The high-quality 3-megapixel or 5-megapixel color camera with flash is a standard feature of the CN50.

Location of the CN50 Color Camera

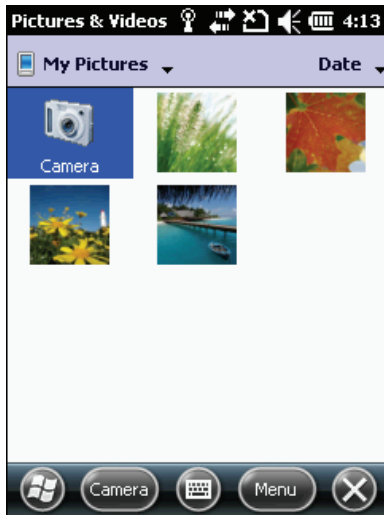

You can use the Pictures & Videos application on the CN50 to take, view, and edit pictures or record and launch video clips stored on the CN50 or a storage card. You can also send pictures and video clips to others or save an image as the background on the Today screen.

After you open the camera application, you can configure the camera options by tapping **Menu**.

Take a Picture

You can take photos in high, normal, or low quality, with image sizes up to 2048 x 1536 pixels for the 3-megapixel camera and 2592 x 1944 pixels for the 5-megapixel camera. When you take a picture, the images are saved as .jpg files and by default are stored in the /My Documents/My Pictures folder.

- 1 Tap **Start > Pictures & Videos**.
- 2 Tap the **Camera** icon in the grid, or tap **Camera** on the taskbar.

- 3 Using the screen as a viewfinder, move the camera until you have the image you want to take a picture of.
Press to zoom in, or press to zoom out.
- 4 Tap **Take Pic** on the taskbar or press **Enter** to save the image. If you select to save your pictures to Main memory, they are saved to permanent storage on the CN50.

Record a Video

To record video, you need to switch to video mode. When you record video, the video is saved as an .mp4 file and stored in the /My Documents/My Pictures folder.

- 1 Tap **Start > Pictures & Videos**.
- 2 Tap the **Camera** icon in the grid or the **Camera** button on the Tile bar, or press **Enter**.
- 3 Tap **Menu > Video**.

In the lower right, the camera icon turns into a video camera. On the Tile bar, the **Record** button replaces the **Take Pic** button.

- 4 Using the screen as a viewfinder, move the video camera until you see the scene you want to video record.

Press  to zoom in, or press  to zoom out.

- 5 Tap **Record** on the Tile bar or press **Enter** to start recording.
- 6 When you are done, tap **Stop** or press **Enter** to stop recording and save the video.

If you choose to save your videos to main memory, they are saved to permanent storage on the CN50.

Save Pictures and Videos to an SD Card

Pictures and videos are automatically saved to the main memory on your CN50. You can change the default location to an SD card to easily transport them to another device.

- 1 Install a microSD card. For help, see [“Insert a MicroSD Card” on page 16](#).
- 2 Tap **Start > Pictures & Videos**.
- 3 Tap the **Camera** icon.
- 4 Tap **Menu > Settings**.
- 5 From the **Save file to** list, select **SD card**, and tap **OK**.

6

Use GPS

The CN50 comes equipped with an integrated Global Positioning System (GPS) receiver. It can deliver standards-based National Marine Electronics Association (NMEA) data strings to GPS applications.

About the Integrated GPS on Your Computer

Intermec recommends that you use the GPS Intermediate Driver (GPSID) instead of directly accessing the GPS hardware. The GPSID is a Microsoft software component that interacts between applications and the GPS hardware.

Using the GPSID allows Intermec support for Extended Ephemeris, which enhances GPS performance by:

- reducing the amount of time it takes your GPS receiver to acquire a fix.
- eliminating the need to obtain precise satellite data information from the GPS satellites.

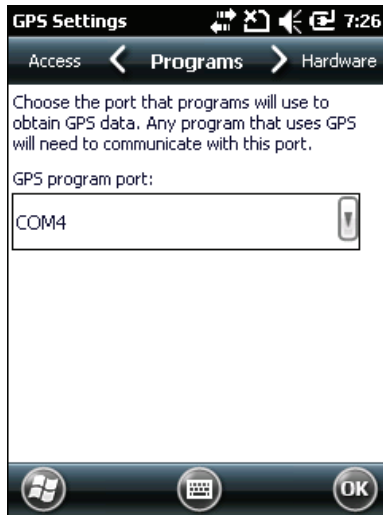

As a Microsoft software component, the GPSID also:

- allows multiple applications to simultaneously access the GPS data stream.
- provides access to GPS data without requiring applications to recognize and parse NMEA syntax.

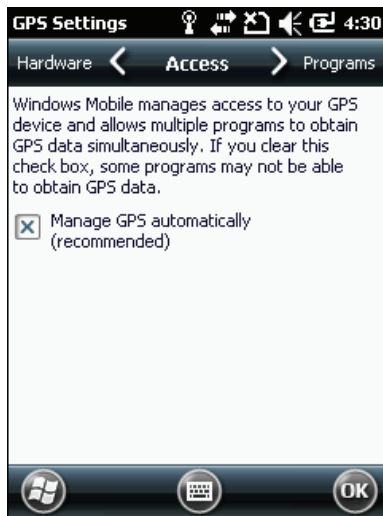

Use the GPSID Installed on the Computer

To use the GPSID installed on your CN50, you need to configure the GPSID settings.

- 1 Tap **Start** > **Settings** > **System** > **External GPS**. The GPS Settings screen appears with **Programs** selected.

- 2 Select the COM port that you want your programs to use to get GPS data from your CN50.
- 3 Tap **Access** and select the **Manage GPS automatically** check box.

- 4 Tap **OK**.

Improve GPS Performance on the Computer

The integrated CN50 GPS module has three operating modes:

- Standalone GPS
- Assisted GPS
- Qualcomm XTRA™

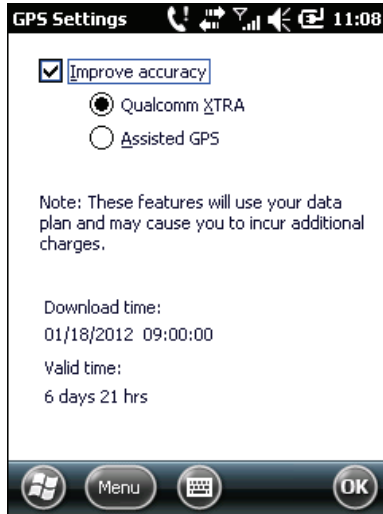

Integrated GPS Operating Modes

Operating Mode	Description
Standalone GPS	In Standalone GPS mode, the GPS module relies solely on GPS satellites to determine position.
Assisted GPS	In Assisted GPS mode, the computer can determine position without receiving GPS signals directly from satellites; instead, the computer receives GPS signals and information provided by the cellular network. Even when the computer can receive a satellite signal, Assisted GPS can improve position accuracy and reduce the time to determine initial position (Time-To-First-Fix). Check with your cell phone carrier for availability and pricing for Assisted GPS service.
Qualcomm XTRA	Qualcomm XTRA's technology provides enhanced operation for Standalone GPS. This option enables the CDMA or UMTS-enabled computer to automatically download a small assistance data file from the XTRA servers through a brief internet access session.

Note: You must select Qualcomm XTRA operating mode to download the assistance file.

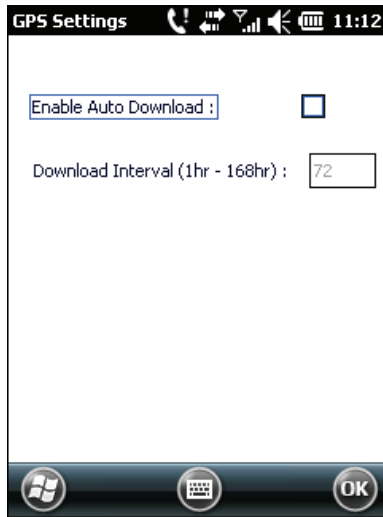

- 1 Tap **Start** > **Settings** > **System** > **GPS Settings**.
- 2 Tap **Menu** > **Download Assistance File** to download a small assistance data file.
- 3 Select **Improve accuracy** and choose an operating mode.

- 4 Tap **OK**.

You can set the mobile computer to automatically download the assistance data file from the XTRA servers.

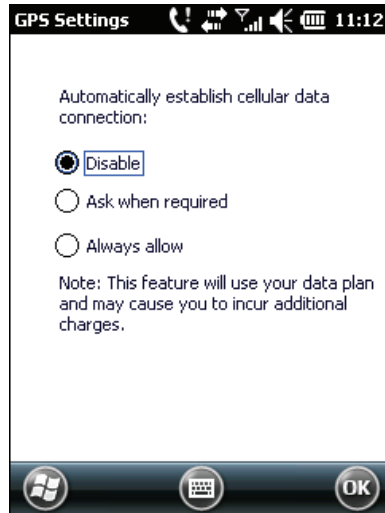

- 1** Open the GPS Settings Menu by tapping **Start > Settings > System > GPS Settings > Menu.**
- 2** Tap **Set Auto-download Param.**
- 3** Select **Enable Auto Download** and set the **Download Interval.**

- 4** Tap **OK.**

After you set your mobile computer to automatically download the assistance data file, you can set the mobile computer to automatically establish the required data connection.

- 1** Open the GPS Settings Menu by tapping **Start > Settings > System > GPS Settings > Menu.**
- 2** Tap **Options.**
- 3** Select **Always allow.**

- 4** Tap **OK.**

7

Configure the Computer

Use this chapter to learn about the available methods for configuring your mobile computer. You can also use this chapter to learn how to configure network communications and wireless security.

How to Configure the Computer

You can configure many parameters on the CN50 such as the bar code symbologies it decodes or the network settings. These characteristics are controlled by configuration parameters. The values you set for these configuration parameters determine how the CN50 operates.

There are several ways to configure the CN50:

- Directly on the CN50 using Intermec Settings. This allows you to change only the settings on that computer. For more information, see the next section, **“Use Intermec Settings On the Computer.”**
- You can use the ScanNGo utility, which is part of SmartSystems™ Foundation, to quickly provide the CN50 with the minimal information necessary to connect to a secure network. For more information, see **“Configure 802.11 Radio Communications” on page 67** and **“Manage the Computer With SmartSystems Foundation” on page 90.**
- You can use a third party device management product that supports the CN50, such as the Microsoft System Center Mobile Device Manager. For more information, visit the Microsoft website at <http://msdn.microsoft.com/en-us/default.aspx>.
- You can use Imager Configuration Bar codes to enable or disable symbologies, reset to factory defaults, and set predefined imager modes. For more information, see **“Imager Configuration Bar Codes” on page 127.**

Use Intermec Settings On the Computer

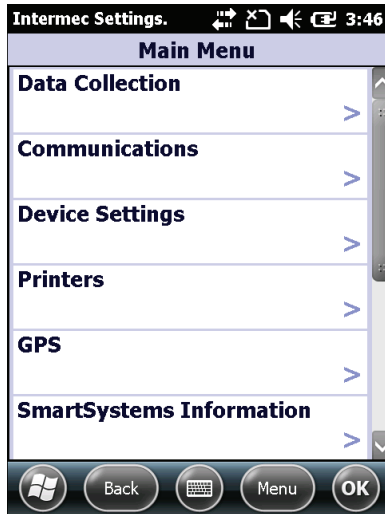

Use Intermec Settings to configure parameters for Intermec applications on the computer, as well as device-specific parameters like volume. You can configure parameters for important functions like data collection and communications.

Start Intermec Settings

Intermec Settings is located on the System screen.

- Tap **Start > Settings > System > Intermec Settings**.

The Intermec Settings Main Menu appears.

About the Structure of Intermec Settings

Use the next tables to help find the parameters you want to configure. The tables are organized to reflect the structure of the Intermec Settings Main Menu.

If you see > next to a menu option, there are more screens available in the next level. If you see ... next to a menu option, there is only one more screen available.

Most parameters are saved when you tap **OK**. Some settings require you to reboot the computer for the changes to take effect.

Data Collection Menu

Data Collection Options	Parameters You Can Configure
Internal Scanner	<ul style="list-style-type: none"> • Enable scanner port • Symbologies • Symbology Options • Scanner Settings • Imager Settings • Decode Security
BT-Configure on Connect	BT-Configure on Connect
Virtual Wedge	<ul style="list-style-type: none"> • Enable Virtual Wedge • Bar Code Scanner • Magstripe Reader
Magstripe Reader	<ul style="list-style-type: none"> • Enable Magstripe Reader • Reader Model

Communications Menu

Communications Options	Parameters You Can Configure
Device Name	Device name
Enable 802.11	Enable 802.11
Ethernet Adapter	IP Settings
Bluetooth	Bluetooth settings (Power, Discoverable, and so on)

Device Settings Menu

Device Settings Options	Parameters You Can Configure
Backlight	<ul style="list-style-type: none"> • Screen Backlight - Battery Power • Screen Backlight - External Power
Date and Time	Date and time settings
Good Read	<ul style="list-style-type: none"> • Internal Scanner • Tethered Scanner • Bluetooth Scanner
Sounds	<ul style="list-style-type: none"> • Beeper and voice volume • Headset beeper volume
Screen	Screen rotation

Device Settings Options	Parameters You Can Configure
Power Management	<ul style="list-style-type: none"> • Battery Power • External Power
System Component Versions	System component versions (read-only)
IDL Runtime Versions	ITC50 (read-only)
Features Disabled by Policy	None (read-only)

Printers Menu

Printers Options	Parameters You Can Configure
Printer	Printer settings (Auto Detect Printer, Memory, Display, and so on)

SmartSystems Information Menu

SmartSystems Information Options	Parameters You Can Configure
Ready-to-Work	Ready-to-Work information (read-only)
Identity	Identity information (Hardware Version, Firmware Version, OS Version, and so on) (read-only)
Administrator	Administrator settings (Name, Phone, and Email)
Location	Location settings (Country, State, City, Campus, and Detail)

License Manager Menu

License Manager Options	Parameters You Can Configure
About	About Settings (read-only)
License Vault	None (displays applications that are licensed)

Device Monitor Menu

Device Monitor Options	Parameters You Can Configure
Poll Period (min)	Poll Period (min)
Send Asset Msg on Poll	Send Asset Msg on Poll

Device Monitor Options	Parameters You Can Configure
Threshold Values	<ul style="list-style-type: none">• Battery• Storage• Memory

Core Messaging Service Menu

Core Messaging Service Options	Parameters You Can Configure
Server IP	Server IP (read-only)
Associated Server IP	Associated Server IP
Broadcast Name	Broadcast Name
Port	Port (read-only)
Keep Alive Ping Interval	Keep Alive Ping Interval

For more information on all parameters in Intermec Settings, see the [*Intermec Settings Command Reference Manual*](#).

Navigate in Intermec Settings

You can easily navigate through the screens in Intermec Settings to find the parameter you need to configure.

To move down a level in Intermec Settings:

- Tap the menu item in the list.

To move back a level in Intermec Settings:

- Tap **Back** or **Cancel** on the Tile bar.

To save a parameter setting:

- Tap **OK**.

To exit Intermec Settings:

- Tap **Menu** > **Exit** or **OK**.

Configure Profile Settings With Intermec Settings

A profile is a set of predefined values that you can easily apply to the computer to ensure optimal performance in a specific scenario. The end user does not need to figure out the “right” settings because we have already done this for you. Profile Settings is available from the Start menu so you can make it available to the end user for easy configuration.

Use Intermec Settings to determine the profiles you want the end user to see in the Profile Settings application.

- 1 Go to **Device Settings > Profile Settings Application**.
- 2 Select **Power** or **Scanning**.
- 3 From the Power or Scanning submenu, check or clear the **Display** check box for the settings you want to have available to the end user.
- 4 Click **OK** to save your selection.

Restore Default Settings

You can restore default settings for an individual menu or for all Intermec Settings parameters.

- 1 Navigate to the menu you want to restore to defaults.
- 2 Tap **Menu > Restore Menu Defaults**.
- 3 When prompted, tap **Yes** to restore the menu default settings.
- 4 If prompted to refresh the computer, tap **Yes**.

You can restore defaults settings for all parameters.

- 1 Tap **Menu > Restore All Defaults**.
- 2 Tap **Yes**.
- 3 After several minutes, all of the default settings are restored.

How to Hide Menu Items in Intermec Settings

In Intermec Settings, you can hide items in the CN50 menus, or in the directory tree in the SmartSystems console. Hidden items are not saved when you back up your settings in the SmartSystems console.

You can hide menu items in Intermecc Settings in the SmartSystems console:

- To hide menu items, right-click a menu item and choose **Hide Menu Item** from the list. Click **Yes** to clear the confirming message.
- To restore menu items, click the CN50 name at the top of the directory tree to select it, and then choose **View > Unhide Items**. All hidden menu items are restored

You can hide menu items in Intermecc Settings on the CN50:

- To hide menu items, tap and hold the item, and then choose **Hide Menu Item** from the list. Tap **Yes** to clear the confirming message.
- To restore hidden items in a single menu, tap and hold the menu bar where the item was hidden, and then choose **Restore Item Default** from the popup list.
- To restore all hidden items in all menus, tap **Menu > Unhide All Items**.

Note: When you restore default settings in Intermecc Settings, only the settings for visible items are restored to defaults. The settings for hidden menu items are not affected. For more information, see the SmartSystems Foundation online Help.

About Network Communications

The CN50 is a versatile mobile computer that you can easily add to your wireless or wired data collection network. You can connect your CN50 using:

- 802.11b/g radio communications.
- Ethernet communications.
- Bluetooth communications.
- USB communications.

Configure 802.11 Radio Communications

Your CN50 has an 802.11 radio to transfer data using wireless communications. This section assumes that your wireless network is set up, including your access points. By default, the Wi-Fi radio is enabled.

About Wi-Fi (802.11b/g Radio) Communications

To add your mobile computer to your Wi-Fi network so you can transfer data wirelessly, you need to enable the Wi-Fi radio and configure radio parameters. You can use:

- Intermec Settings to enable the Wi-Fi radio. For help, see the next section, [“Enable the Wi-Fi Radio With Intermec Settings.”](#)
- ScanNGo bar codes to enable the Wi-Fi radio and set the Funk security to its default settings. For help, see [“Enable the Wi-Fi Radio With ScanNGo Bar Codes” on page 68.](#)

Caution

Make sure all components with antennas are at least 30 cm (1 ft) apart when power is applied. Failure to comply could result in equipment damage.

Enable the Wi-Fi Radio With Intermec Settings

If you need to enable the radio and add your mobile computer to your Wi-Fi network, use the following procedure.

1 Start Intermec Settings by tapping **Start > Settings > System > Intermec Settings.**

2 Tap **Communications > 802.11 Radio > Radio Enabled.**

3 Select the **Radio Enabled** check box and tap **OK.**

By default, the computer selects Funk security and enables DHCP.

4 Use Intermec Settings to configure the parameters you need to communicate with your network.

5 Configure Wi-Fi security. For help, see [“About Wireless Security” on page 76.](#)

Enable the Wi-Fi Radio With ScanNGo Bar Codes

Use the ScanNGo bar code to enable the Wi-Fi radio and set the Funk security to its default settings.

To enable the Wi-Fi radio and set all communication settings to their default values, scan the following ScanNGo bar code.

- Enable Wi-Fi, set Funk defaults (Wi-Fi, WWAN Radio if applicable)

The ScanNGo application starts, enables the radio, and configures the default security settings. If you want to change the security settings from their default values, see [“About Wireless Security” on page 76](#).

Configure Ethernet Communications

You connect your CN50 to your Ethernet network with an Ethernet cable and an AD24 Ethernet multidock or AD27 single dock with Ethernet adapter.

- 1** Connect your CN50 to an Ethernet network with an AD24. Ethernet communications is automatically enabled on your CN50.
- 2** Make sure that your CN50 is communicating with the network. You should see the network connection icon () in the navigation bar.

Configure Bluetooth Communications

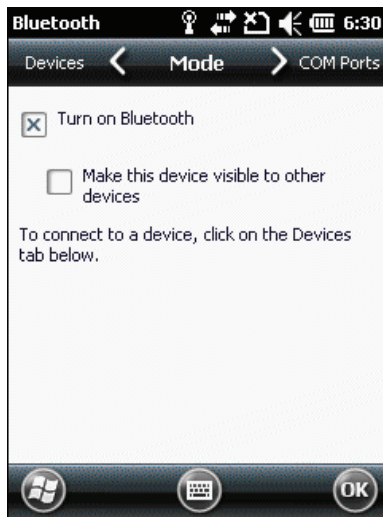

Your mobile computer is Bluetooth™-enabled, which lets you connect to other Bluetooth devices, such as scanners, printers, or audio devices.

Note: You can also configure Bluetooth settings using Intermec Settings. For more information, see **“Use Intermec Settings On the Computer” on page 60.**

You need to turn on the Bluetooth radio before you can discover and connect to other Bluetooth devices. By default, the radio is turned off.

- 1 Tap **Start > Settings > Bluetooth > Mode.**
- 2 Tap the **Turn on Bluetooth** check box.

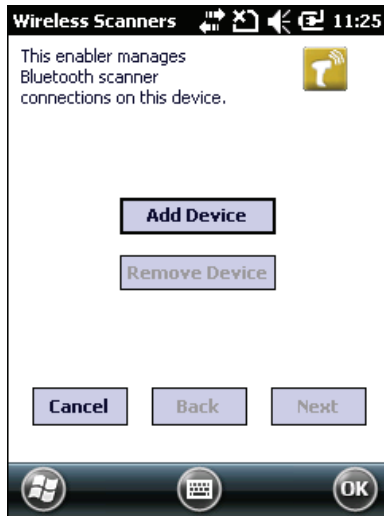

- 3 (Optional) To make the CN50 visible to other Bluetooth devices, tap **Make this device visible to other devices.**
- 4 Tap **OK.**

The Bluetooth radio maintains its state through a warm or cold boot and maintains virtual COM ports. But, if you clean boot your CN50 you need to recreate pairings to devices.

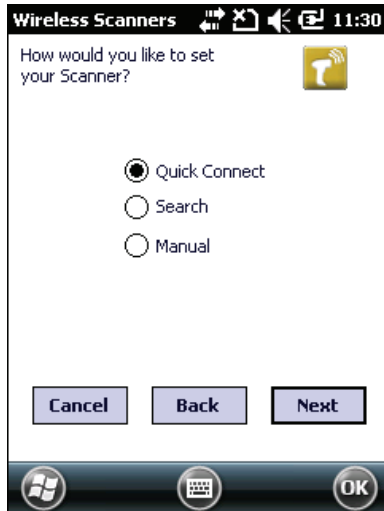

Connect to a Bluetooth Scanner

You can connect to an Intermec Bluetooth scanner, such as the SF51 or SR61, by using the Wireless Scanning enabler.

- 1 Tap **Start > Settings > System > Wireless Scanning**.

- 2 Tap **Add Device**.

- 3** To add a scanner by scanning a bar code on the CN50:
 - a** Tap **Quick Connect** and then tap **Next**.
 - b** Scan the bar code and tap **Finish**.

To search for scanners:

- a** Tap **Search** and then tap **Next**. The CN50 looks for scanners, and the Bluetooth device names of found scanners appears in the list.
- b** Tap the scanner device name in the list and then tap **Next**. The scanner is paired with the CN50.

To manually add a scanner:

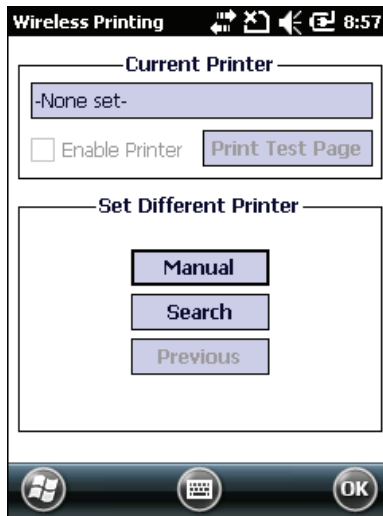

- a** Tap **Manual** and then tap **Next**.
- b** Enter the Bluetooth address of the scanner in the entry field.
- c** Tap **Next**. The scanner is paired with the CN50.

Connect to a Bluetooth Printer

To configure your CN50 for Bluetooth wireless printing, you need to:

- make sure Bluetooth power is on. For help, see “**Configure Bluetooth Communications**” on page 69.
- create an application that opens the wireless printing COM port on your CN50. For help, see the Bluetooth Resource Kit, which is part of the Intermec Developer Library (IDL), available from the Intermec website at www.intermec.com/idl.
- select the current wireless printer on the CN50. For help, see the next procedure.

- 1 Select **Start > Settings > System > Wireless Printing**.

- 2 Tap **Search** to find a printer, or tap **Manual** to enter a device address. Follow the onscreen instructions to select the current wireless printer.

- 3 (Optional) Tap **Print Test Page**. The printer prints the test page.

Note: You can also print wirelessly from inside your applications using Microsoft APIs with Bluetooth extensions for Winsock and Bluetooth virtual COM ports. For help, see the IDL which is available from the Intermec website at www.intermec.com/idl.

Connect to a Bluetooth Audio Device

Use the Bluetooth Audio enabler to discover, activate, and connect to a Bluetooth audio device, such as a headset.

- 1 Tap **Start** > **Settings** > **Bluetooth**.
- 2 From the horizontal scroll at the top of the page, select **Devices**.

- 3 Follow the onscreen instructions to connect to a Bluetooth audio device.

About USB Communications

You can use the CN50 AC adapter to transmit data to and receive data from a desktop PC or an Ethernet multidock through USB communications. The USB port supports both USB client and USB host. The port automatically senses the cable you are using and determines which drivers to use. For more information about this accessory and how to order it, see **“CN50 Accessories” on page 5**.

Create an ISP Connection

You can connect to your Internet Service Provider (ISP) and use the connection to send and receive email messages and view web pages. Get an ISP dial-up access telephone number, a user name, and a password from your ISP.

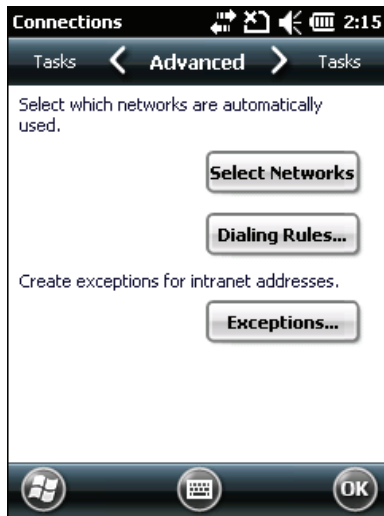

After the CN50 is connected, you can:

- send and receive message by using Messaging (Outlook Email).
- visit web pages by using Internet Explorer Mobile.

Tap the **Help** icon at any time to view additional information for the wizard or the settings.

- 1** Tap **Start > Settings > Connections > Connections**.
- 2** Under My ISP, tap **Add a new modem connection**.
- 3** Enter a name for the connection, such as “ISP Connection.”
- 4** If using an external modem connected to your mobile computer with a cable, select **Hayes Compatible on COM1** from the Select a modem drop-down list.
- 5** Tap **Next**.
- 6** Enter the access phone number and tap **Next**.
- 7** Enter the **User name**, **Password**, and **Domain** (if provided by an ISP or your network administrator).
- 8** Tap **Finish**.

- 9 On the Connections screen, tap **Advanced** on the horizontal scroll.

- 10 Tap **Dialing Rules**.
- 11 When the Enable Dialing Rules box appears, tap **OK**.
- 12 Tap **Edit**.
- 13 In the **Name** field, enter your phone type (**Home**, **Mobile**, or **Work**).
- 14 Tap **OK** until you exit the Connections screen.

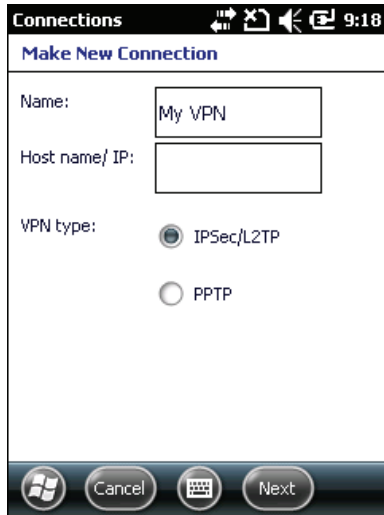

Create a VPN Server Connection

A VPN connection helps you to securely connect to servers, such as a corporate network, through the Internet. Before you can make a VPN connection, you will need the following items from your network administrator:

- User name
- Password
- Domain name
- TCP/IP settings
- Host name or IP address of the VPN server

After you locate this information, you can create a VPN server connection.

- 1 Tap **Start > Settings > Connections > Connections**.
- 2 Under **My Work Network**, tap **Add a new VPN server connection**.

- 3 Step through the screens to set up your VPN connection.

About Wireless Security

The CN50 provides five types of security for your wireless network:

- Wi-Fi Protected Access 2 (WPA2™)
- Wi-Fi Protected Access (WPA)
- 802.1x
- LEAP
- WEP

This section explains how to configure wireless security on your CN50. If you choose not to use security, see **“Use Open (No Security) Associations With Microsoft” on page 86**. Intermec recommends that you always implement WPA2 security using PSK (Personal) or 802.1X (Enterprise) key management.

You must use either Funk or Microsoft security to implement your security solution. For details, see the next section.

If you are using WPA-802.1x, WPA2-802.1x, or 802.1x security, this section also assumes that your authentication server and authenticators are properly configured.

Note: Your security choice does not depend on your authentication server. For example, you can choose Funk security if you use Microsoft Active Directory® to issue certificates.

Choose Between Microsoft and Funk Security

The computer supports both Funk and Microsoft security, which dynamically selects wireless networks based on your preferences. The option you choose depends on your network security needs.

- If you are using the CN50 in a static environment that requires a high level of security, you should use Funk security, which offers CCX v4.0 compliance, support for LEAP and TTLS, and configuration for up to four profiles.
- If you are primarily using the CN50 to connect to Wi-Fi hotspots, you may want to use Microsoft security.

To use Microsoft security, you need to select it as your security choice. For help, see [“About Microsoft Security” on page 82](#).

About Funk Security

You can define up to four profiles for Funk security. Different profiles let your CN50 communicate in different networks without having to change all of your security settings. For example, you may want to set up one profile for the manufacturing floor and one for the warehouse. By default, the active profile is Profile 1.

Select a Funk Security Profile

You can define up to four Funk security profiles.

- 1 Start Intermec Settings. For help, see [“How to Configure the Computer” on page 60](#).
- 2 Choose **Communications** > **802.11 Radio** > **Funk Security**.
- 3 Choose a profile. A list of configurable settings appears.

- 4** (Optional) In the **Profile Label** text box, enter a meaningful name for your profile.
- 5** Configure your security settings. For help, see the next sections.
- 6** Repeat Steps 3 through 5 for each profile you want to define.
- 7** Set an active profile by choosing it in the **Active Profile** list.
- 8** Save your settings.

Configure WPA or WPA2 Enterprise (802.1x) Security With Funk

After you configure the communications and radio parameters on your mobile computer and select Funk as your security choice, you can configure WPA-802.1x or WPA2-802.1x security.

- 1** Start Intermec Settings.
- 2** Choose **Communications > 802.11 Radio > Funk Security**.
- 3** Select the profile you want to configure.
- 4** For **Association**, choose **WPA** or **WPA2**. Encryption automatically defaults to **TKIP** or **AES**, respectively.
- 5** For **8021x**, choose **TTLS**, **PEAP**, **EAP-FAST**, or **TLS**.
- 6** If you choose **TTLS** or **PEAP**:
 - a** For **Prompt for Credentials**, choose **Enter credentials now**.

Note: You can use **Prompt for Credentials** to troubleshoot your network connection.

- b** Enter a **User Name** and **User Password**.

- c For **Validate Server Certificate**, choose **Yes**.

Note: The correct date must be set on your CN50 when you enable **Validate Server Certificate**.

7 If you choose **TLS**:

- a Load a user and root certificate on your CN50. For help, see **“Load a Certificate” on page 86**.
- b Enter a **User Name** and **Subject Name**.
- c For **Validate Server Certificate**, choose **Yes**.
- d (Optional) To increase your level of security, enter a **Server 1 Common name** and a **Server 2 Common name**.

Configure WPA or WPA2 Personal (PSK) Security with Funk

After you configure the communications and radio parameters on your mobile computer and select Funk as your security choice, you can configure WPA-PSK or WPA2-PSK.

- 1** Start Intermec Settings.
- 2** Choose **Communications > 802.11 Radio > Funk Security**.
- 3** Select the profile you want to configure.
- 4** For **Association**, choose **WPA** or **WPA2**.
- 5** For **8021x**, choose **None**.
- 6** For **Pre-Shared Key**, enter the pre-shared key or passphrase.

The pre-shared key must be a value of 32 hex pairs preceded by 0x for a total of 66 characters. The value must match the key value on the access point. The passphrase must be from 8 to 63 characters. After you enter a passphrase, the CN50 internally converts it to a pre-shared key. This value must match the passphrase on the authenticator.

- 7** Save your settings.

Configure 802.1x Security With Funk

After you configure the communications and radio parameters on your mobile computer and select Funk as your security choice, you can configure 802.1x-WEP security with Funk. Intermec recommends that you use WPA2-802.1x instead of 802.1x-WEP if possible.

- 1 Start Intermec Settings.
- 2 Choose **Communications > 802.11 Radio > Funk Security**.
- 3 Select the profile you want to configure.
- 4 For **Association**, choose **Open**.
- 5 For Encryption, choose **WEP**.
- 6 For **8021x**, choose **TTLS, PEAP, or TLS**.
- 7 If you chose **TTLS** or **PEAP**:

- a Enter a **User Name**.
- b For **Prompt for Credentials**, choose **Enter credentials now**.

Note: You can use **Prompt for Credentials** to troubleshoot your network connection.

- c Enter a **User Password**.
 - d For **Validate Server Certificate**, choose **Yes**.
- 8 If you choose **TLS**:
 - a Load a user and root certificate on your CN50. For help, see **“Load a Certificate” on page 86**.
 - b For **Validate Server Certificate**, choose **Yes**.
 - c Enter a **User Name** and **Subject Name**.
 - 9 (Optional) To increase your level of security, enter a **Server 1 Common name** and a **Server 2 Common name**.
 - 10 Save your settings.

Configure LEAP Security With Funk

After you configure the communications and radio parameters on your mobile computer and select Funk as your security choice, you can configure LEAP.

- 1 Start Intermec Settings.
- 2 Choose **Communications > 802.11 Radio > Funk**.
- 3 Select the profile you want to configure.
- 4 For **8021x**, choose **LEAP**.
- 5 For **Association**, choose **Open**, **WPA**, **WPA2**, or **Network EAP**. Encryption automatically defaults to **TKIP** if you choose **WPA**, **AES** if you choose **WPA2**, and **WEP** if you choose **Open** or **Network EAP**.
- 6 For **Prompt for Credentials**, choose **Enter credentials now**.
- 7 Enter a **User Name** and **User Password**.
- 8 Save your settings.

Configure Static WEP Security With Funk

After you configure the communications and radio parameters on your mobile computer and select Funk as your security choice, you can configure static WEP security with Funk. Intermec recommends that you use WPA2-PSK instead of WEP if possible.

- 1 Start Intermec Settings.
- 2 Choose **Communications > 802.11 Radio > Funk Security**.
- 3 Select the profile you want to configure.
- 4 For **Association**, choose **Open**.
- 5 For **Encryption**, choose **WEP**.
- 6 For **8021x** choose **None**.
- 7 Define a value for the keys you want to use. You can define up to four keys (**Key 1** through **Key 4**).

Enter an ASCII key or a hex key that is either 5 bytes or 13 bytes long depending on the capability of the radio. Set a 5- byte value for

64-bit WEP or a 13-byte value for 128-bit WEP. Hex keys must be preceded by 0x and contain 5 or 13 hex pairs.

- 8 For **Transmit key**, choose the key you want to use for transmitting data.
- 9 Save your settings.

Use Open (No Security) Associations With Funk

You can configure your mobile computer for no security with Funk.

- 1 Start Intermec Settings.
- 2 Choose **Communications** > **802.11 Radio** > **Funk Security**.
- 3 Select the active profile you are using.
- 4 For **Association**, choose **Open**.
- 5 For **Encryption**, choose **None**.
- 6 Tap **OK**. Your settings are saved.

About Microsoft Security

With Microsoft Wireless Zero Configuration (WZC), you can configure:

- WPA or WPA2
- 802.1x
- Static WEP

Select Microsoft Security

The default security setting is Funk. If you want to use Microsoft Wireless Zero Configuration (WZC) security, you need to select it as your security choice. After you select Microsoft as your security choice, you will be prompted to save your settings and reset your computer for your change to take effect.

- 1 Start Intermec Settings. For help, see **“How to Configure the Computer” on page 60**.
- 2 Choose **Communications** > **802.11 Radio** > **Security Choice**.

- 3** From the **Security Choice list**, select **Microsoft Security**. An alert box appears telling you that you must save your settings and warm boot the computer for the new security choice to take effect.
- 4** Choose **Yes**. The computer resets and starts with Microsoft Security as the Security Choice.

Configure WPA or WPA2 Enterprise (802.1x) Security With Microsoft

After you configure the communications and radio parameters on your mobile computer and select Microsoft as your security choice, you can configure WPA or WPA2 Enterprise (802.1x) security with Microsoft.

- 1** Start Intermec Settings.
- 2** Choose **Communications > 802.11 Radio > Microsoft Security**.
- 3** For **Infrastructure Mode**, choose **Infrastructure**.
- 4** For **Network Authentication**, choose **WPA. Data Encryption** automatically defaults to **TKIP**.
- 5** For **802.1x Authentication**, choose either **MD5, TLS, or PEAP**.
- 6** If you choose **TLS**:
 - a** Choose **Properties > Run App**. The Auth. Settings dialog box appears.
 - b** Choose **Select**.
 - c** Select your certificate from the list and press **Enter**. The User Logon dialog box appears.
 - d** Enter a **User Name** and **Domain** and press **Enter**.
- 7** If you choose **PEAP**:
 - a** Choose **Properties > Run App**. The Auth. Settings box appears.
 - b** Choose **Validate Server** and press **Enter**. When the radio starts to authenticate, the Network Password dialog box appears.
 - c** Enter a **User Name** and **Password** and select **Save Password**.

- d (Optional) In the **Domain** field, enter the Active Directory domain associated with the user account.

8 Save your settings.

Configure WPA or WPA2 Personal (PSK) Security With Microsoft

After you configure the communications and radio parameters on your mobile computer and select Microsoft as your security choice, you can configure WPA or WPA2 Personal (PSK) security with Microsoft.

- 1** Start Intermec Settings.
- 2** Choose **Communications > 802.11 Radio > Microsoft Security**.
- 3** For **Infrastructure Mode**, choose **Infrastructure**.
- 4** For **Network Authentication**, choose **WPA-PSK. Data Encryption** automatically defaults to **TKIP**.
- 5** For **Pre-Shared Key**, enter the pre-shared key or the passphrase.
The pre-shared key must be a value of 32 hex pairs preceded by 0x for a total of 66 characters. The value must match the key value on the authenticator. The passphrase must be from 8 to 63 characters. After you enter a passphrase, the CN50 internally converts it to a pre-shared key.
- 6** Save your settings.

Configure 802.1x Security with Microsoft

After you configure the communications and radio parameters on your mobile computer and select Microsoft as your security choice, you can configure 802.1x security with Microsoft.

- 1** Start Intermec Settings.
- 2** Choose **Communications > 802.11 Radio > Microsoft Security**.
- 3** For **Infrastructure Mode**, choose **Infrastructure**.
- 4** For **Network Authentication**, choose **Open**.
- 5** For **Data Encryption**, choose **WEP**.

- 6** For **802.1X Authentication**, choose **TLS** or **PEAP**.
- 7** If you choose **TLS**:
 - a** Choose **Properties > Run App**. The Auth. Settings box appears.
 - b** Choose **Select**.
 - c** Select your certificate from the list and press **Enter**. The User Logon dialog box appears.
 - d** Enter a **User Name** and a **Domain**.
- 8** If you choose **PEAP**:
 - a** Choose **Properties > Run App**. The Auth. Settings box appears.
 - b** Select **Validate Server** and press **Enter**. When the radio starts to authenticate, the Network Password dialog box appears.
 - c** Enter a **User Name** and **Password** and select **Save Password**.
 - d** (Optional) In the **Domain field**, enter the domain.
 - e** Press **Enter**.
- 9** For **Network Key Setting**, choose **Automatic**.
- 10** Save your settings.

Configure Static WEP Security With Microsoft

After you configure the communications and radio parameters on your mobile computer and select Microsoft as your security choice, you can configure static WEP security with Microsoft. Intermec recommends that you use WPA2-PSK instead of WEP if possible.

- 1** Start Intermec Settings.
- 2** Choose **Communications > 802.11 Radio > Microsoft Security**.
- 3** For **Network Authentication**, choose **Open**.
- 4** For **Data Encryption**, choose **WEP**.
- 5** For **Network Key Setting**, choose **Enter Key and Index**.

- 6 For **Network Key Value**, enter an ASCII key or a hex key that is either 5 bytes or 13 bytes long depending on the capability of the radio.

Set a 5-byte value for 64-bit WEP or a 13-byte value for 128-bit WEP. Hex keys must be preceded by 0x and contain 5 or 13 hex pairs.

- 7 For **Network Key Index**, select the key you want to use for data transmission.
- 8 Save your settings.

Use Open (No Security) Associations With Microsoft

You can configure your mobile computer for no security with Microsoft WZC. Intermec recommends that you always set security in your network.

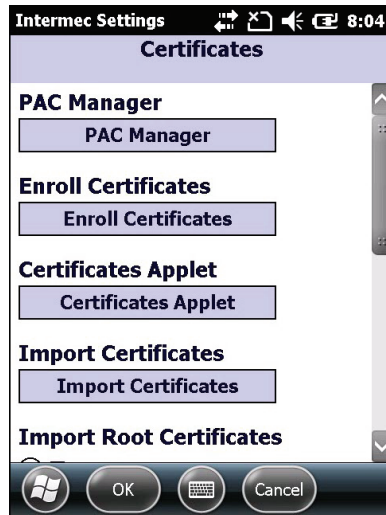

- 1 Start Intermec Settings.
- 2 Choose **Communications > 802.11 Radio > Microsoft Security**.
- 3 For **Network Authentication**, choose **Open**.
- 4 For **Data Encryption**, choose **Disabled**.
- 5 Tap **OK**. Your settings are saved.

Load a Certificate

To use transport layer security (TLS) with WPA or 802.1x security, you need a unique client certificate on the CN50 and a trusted root certificate authority (CA) certificate. Certificates are pieces of cryptographic data that guarantee a public key is associated with a private key. They contain a public key and the entity name that owns the key. Each certificate is issued by a certificate authority.

- 1 Start Intermec Settings.
- 2 Go to **Start > Settings > System > Intermec Settings**.

- 3 Tap **Communications** > **802.11 Radio** > **Certificates**. The Certificates screen appears.

- 4 To import a certificate chain:
- Tap **Import Certificates** to install the selected certificate.
 - In the CertImportUI screen, tap the <<< button next to the Select pfx to import text field.
 - Select the root certificate from the list.
 - Tap **Import Certificate**.
- 5 To import user and root certificates from a Microsoft IAS server:
- Tap **Import Certificates**.
 - Tap **Web Enrollment**.
 - Enter the **User**, **Password**, and **Server** (IP address) to log into the server.
 - Tap **OK**. A dialog box appears asking if you want to load the root certificate.
 - Tap **OK**. The Enrollment Tool message box appears telling you that the certificate has been added.
 - Tap **OK** to close the message box.

8

Manage the Computer

Use this chapter to learn how to remotely update, configure, and monitor your Intermecc mobile computers. You will also find information on installing and developing software applications as well as how to upgrade the system software.

Manage the Computer in Your Network

When you have multiple mobile computers and peripherals in your network, it is essential to have an easy way to manage updates, configure all of the devices, and remotely troubleshoot problems. Intermec provides a free device management software platform called SmartSystems™ to help you manage your devices. You can also purchase third-party device management software through a vendor.

Manage the Computer With SmartSystems Foundation

SmartSystems Foundation is a software platform that lets you manage all of your SmartSystems-enabled devices, including the CN50, simultaneously from a central server. The SmartSystems console displays all SmartSystems-enabled computers and peripherals in your network.

Through the Console, you can:

- drag-and-drop configuration bundles, operating system updates, and firmware upgrades to multiple computers.
- create a “golden” device configuration to use when updating other computers.
- remotely change settings on SmartSystems-enabled computers and peripherals.

With an AutoDeploy license, SmartSystems can automatically push software, configuration settings, and other files to connected CN50s. AutoDeploy can report on asset locations and battery status, making it easier to manage your mobile devices. The license also enables ScanNGo, which makes connecting additional CN50s to your secure wireless network as easy as reading bar codes.

You can download SmartSystems Foundation at no charge from the Intermec website. For more information on SmartSystems, go to www.intermec.com/SmartSystems. To purchase an AutoDeploy license, contact your local Intermec sales representative.

Manage the Computer Using Third Party Software

You can use third-party software such as Wavelink Avalanche to centrally manage your Intermec devices. Device management software enables you to update software, increase security, track your assets, and troubleshoot devices remotely. You can download the Wavelink Enabler for the computer from the Wavelink website. For more information, visit the Intermec website and search for Wavelink Avalanche or visit www.wavelink.com to download the enabler.

Develop and Install Applications

Use the Intermec Resource Kits to develop applications to run on the mobile computer. The Resource Kits are a library of C++, .NET, Java, and web components grouped by functionality that you can use to create applications for the computer. The Resource Kits are part of the Intermec Developer Library (IDL), and can be downloaded from the Intermec website at www.intermec.com/idl. For more information, see the *Intermec Developer Library (IDL) Resource Kit Developer's Guide*.

Package Your Application

For very simple applications, the executable file may be the only file you need to deploy. More typically, you will have a set of files to install. You can also copy a directory structure that contains the application, supporting files, DLLs, images, and data files.

Intermec recommends using .cab files to install your applications. The CN50 uses standard Windows Mobile .cab files and will install third-party .cab files.

Choose a Target Location

You can have your .cab file place your application in any of these memory locations on the CN50:

- The ObjectStore.
- The optional microSD card. Depending on available disk space, you may want to consider installing your application files on the microSD card. Using a microSD card creates the Storage Card folder on the CN50.

- The non-volatile Flash File Store. Applications and data in the Flash File Store will persist through a clean boot.

Files copied to any of these locations are safe when you cold boot the computer as long as the AutoRun system is installed in the appropriate location. When you copy a .cab file to the \CabFiles folder, the folder automatically extracts that .cab file on every cold boot. For more information about AutoRun, see the *Intermec Developer Library (IDL) Resource Kit Developer's Guide*.

Install Applications Using SmartSystems Foundation Console

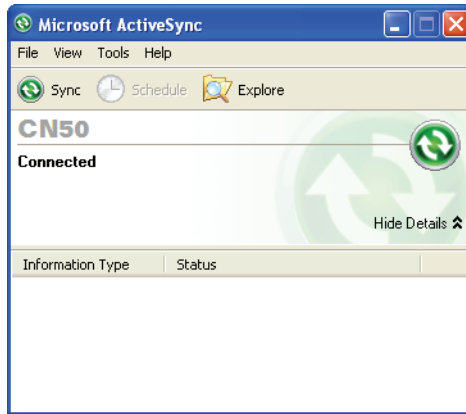

Your CN50 is SmartSystems-enabled, which lets you use the SmartSystems console to install Intermec applications on your CN50. The console is part of SmartSystems Foundation. For more information, go to the Intermec website at www.intermec.com/SmartSystems.

- 1 Download your application file from the Intermec website and unzip it on your desktop PC.
- 2 Double-click the application file to install it. The application file should appear in the Software Vault.
- 3 From the SmartSystems console in the Software Vault, drag-and-drop the application onto each CN50 in your network, or drop the application on a group of computers contained in a folder.

Install Applications Using Microsoft ActiveSync or Windows Mobile Device Center

If you only have a few computers to update with applications, you can copy the files from your PC using Microsoft ActiveSync (Windows XP or earlier) or Windows Mobile Device Center (Windows Vista or Windows 7). ActiveSync and Windows Mobile Device Center are free applications available from the Microsoft website at www.windowsmobile.com/getstarted.

- 1 On your PC, copy the .cab file you want to download to your CN50.
- 2 Create a connection between your PC and mobile computer using ActiveSync or Windows Mobile Device Center.

- 3 Click **Explore**. The Mobile Device window opens.
- 4 Double-click **My Windows Mobile-Based Device**.
- 5 Navigate to the folder you want to copy the .cab file to, and paste the .cab file in the folder.
- 6 On your CN50, tap **Start > File Explorer** and navigate to the location of the .cab file.
- 7 Tap the .cab file to install it.

Install Applications Using a MicroSD Card

If you do not have a network connection or cannot connect your mobile computer to your PC, you can use a microSD card to install applications.

- 1 Suspend the CN50 and remove the microSD card.
- 2 Insert the microSD card into a microSD adapter card and then place it in the storage card reader connected to your PC.
- 3 Copy your application file to the microSD card.
- 4 Remove the microSD card from the adapter card and insert it into the CN50.
- 5 On your CN50, browse to the card and run your application.

Install Applications Using a ScanNGo Bar Code

You can use the ScanNGo function in SmartSystems Foundation to create a bar code that loads software. The bar code contains the address of the server where the software to download is located. Once you scan the bar code, it finds the server, downloads the file, and installs it on the mobile computer. For more information on installing applications using a ScanNGo bar code, see the SmartSystems Foundation Help. For more information on using a ScanNGo bar code to enable Wi-Fi, see **“Configure 802.11 Radio Communications” on page 67**.

Launch Applications Automatically

There are two ways to launch an application automatically on a cold boot:

- Set up your .cab file to place a shortcut to the application in the \Windows\StartUp directory at install time.
- Use AutoRun.exe to start your application at boot time. AutoRun ships on the computer and automates other operations.

At boot time, AutoRun executes any commands found in its data file, Autouser.dat. For more information on how to use the AutoRun.exe feature, view the Readme.txt file located in the My Device\Flash File Store\2577 directory on your computer.

Update the System Software

The mobile computer uses SmartSystems bundles to update the operating system (OS) and the system software.

You can use these methods to update your mobile computer:

- You can update individual computers, or multiple computers at the same time using the SmartSystems console. For help, see the next section, **“Update Individual or Multiple Computers Using SmartSystems Console”**.
- You can update individual computers using a microSD card. For more information, see **“Update Individual Mobile Computers Using a microSD Card” on page 96**.

Update Individual or Multiple Computers Using SmartSystems Console

You can use the SmartSystems console to update the operating system or system software on your mobile computer. The console is part of SmartSystems Foundation and is available from the Intermec website through the Intermec Developer Library (IDL). Before you can update your mobile computer, you need:

- SmartSystems Foundation. To download SmartSystems Foundation, go to www.intermec.com/SmartSystems and click the Downloads tab.
- the SmartSystems bundles you want to install. These SmartSystems bundles are available from the Intermec website at www.intermec.com. Go to **Support > Downloads > OS/Firmware/Drivers** list.

After you have located these items, you can update your mobile computer using SmartSystems Foundation.

- 1 Open the SmartSystems console.
- 2 Make sure the mobile computer is discoverable.
- 3 Make sure the mobile computer is in a powered dock or that power management is disabled.
- 4 Download the SmartSystems bundle to your PC.
- 5 Double-click the SmartSystems bundle on your PC to extract the update files to the software vault.
- 6 From the SmartSystems console, locate the bundles to install and drag them to each mobile computer (or group in a folder) you want to update. The SmartSystems console installs the update on your mobile computers.

After the download is complete, your mobile computer begins the update process and automatically performs a cold boot. The computer then boots into a special Update Loader mode where the computer has no network connections and is completely unusable. This process can take anywhere from 30 seconds to 15 minutes depending on the update.

After the update is complete, the computer boots again.

Note: The SmartSystems console indicates that your mobile computer is offline, by displaying a red stop symbol, until the computer reboots and reconnects to the system.

Update Individual Mobile Computers Using a microSD Card

You can transfer upgrade bundles from your desktop PC to your mobile computer using a storage card. Before you can update your mobile computer, you need:

- the SmartSystems bundles you want to install. These SmartSystems bundles are available from the Intermec website at www.intermec.com. Go to **Support > Downloads > OS/Firmware/Drivers** list.
- a microSD card formatted to FAT or FAT32.

After you have located these items, you can update your mobile computer using a storage card.

- 1 Download the SmartSystems bundle to your PC and note the download location.
- 2 On your desktop PC, navigate to the download location and select the folder with the correct firmware version. For example, umts_wwe or umts_lp.
- 3 Transfer the autoflash.img file into the root directory of the SD card.
- 4 Turn off your mobile computer and install the microSD card in your mobile computer. For help, see **“Insert a MicroSD Card” on page 16**.
- 5 Turn on your mobile computer.

The update process begins. Your mobile computer may restart several times during this process. When the update is complete, the Autoflash Complete message appears.

- 6 Remove the microSD card.

Note: If you do not remove the storage card, the update process repeats each time the computer reboots.

- 7 Reboot your mobile computer and follow the setup process.

9

Troubleshoot and Maintain the Computer

If you encounter any problems while using the CN50, look in this chapter to find a possible solution. You will also find information on routine maintenance.

Troubleshoot Your Mobile Computer

Use this section to troubleshoot some common problems you may experience with your mobile computer.

If you send the mobile computer in for service, it is your responsibility to save the computer data and configuration. Intermec is responsible only for ensuring that the hardware matches the original configuration when repairing or replacing the computer.

Troubleshoot the Wi-Fi Connection

Use this troubleshooting table to help solve problems with your 802.11 radio connection.

Problems With the Wi-Fi Connection

Problem	Solution
The computer is connected to the network and you move to a new site to collect data. Your computer now shows you are not connected to the network.	Move closer to an access point or to a different location to reestablish communications until you reconnect with the network. Any data collected while out of range is transmitted over the network.
The computer appears to be connected to the network, but the host computer is not receiving any information from the computer.	There may be a problem with the connection between the access point and the host computer. Check with network administrator or use your access point user's manual.

Troubleshoot 802.1x Security

Use the following table to troubleshoot problems with your 802.1x security that will prevent you from connecting to your network, such as a missing WEP key value or an incorrect password.

Problems With 802.1x Security

Problem	Solution
The computer indicates that it is authenticated, but it does not communicate with the host.	Make sure the computer IP address, host IP address, subnet mask, default router are configured for network.

Problem	Solution
The computer does not appear to be authenticating and a network connection icon does not appear on the toolbar.	<ul style="list-style-type: none"> • The CN50 may not be communicating with the access point. Make sure the computer network name matches the access point network name (SSID). • 802.1x security network may not be active. Make sure the server software is properly loaded and configured on the server PC. See server software documentation for help.
A network connection icon appears in the toolbar, but then disappears.	<ul style="list-style-type: none"> • The computer may not be communicating with the intended access point. Make sure the computer network name matches the access point network name. Default network name is “INTERMEC.” • Access point may not be communicating with server. Ensure the access point is turned on, properly configured, and has 802.1x security enabled.
You are setting up multiple access points in a network, with different SSIDs, and the connection fails.	The computer does not save WEP key values when changing the SSID. Reenter the WEP key value after changing the SSID and save your changes. You should now be able to connect to the different access points.
The computer indicates it is not authenticated.	<p>Make sure that:</p> <ul style="list-style-type: none"> • the User Name and Password parameters on the computer must match the user name and password on authentication server. You may need to reenter the password on both the computer and authentication server. • on your authentication server, the user and group are allowed and the group policy is allowed to log into the server. For help, see the documentation that shipped with your authentication server software. • the IP address and secret key for access point must match the IP address and secret key on the authentication server. You may need to reenter the IP address and secret key on both your access point and authentication server. • the authentication server software is running on the server PC.
You receive a message saying “The server certificate has expired or your system date is incorrect” after you perform a clean boot on the computer.	Date and time are not saved when you perform a clean boot. Reenter the date and time, and then save your changes.

Check 802.11 Network Status

If you have trouble connecting to your 802.11 wireless network:

- Make sure you have correctly set network parameters on the mobile computer.
- Check your wireless security settings.

Follow the next procedure to verify available access points and networks, check signal strength, and view other diagnostics. If you need to contact Intermec Product Support, this information can be helpful in troubleshooting wireless network connection issues.

- 1** Tap **Start > File Explorer > Program Files > Intermec > Network > Wi-Fi > ISpyWiFi**. The ISpyWiFi application launches.

The ISpy tab shows:

- MAC address and IP address of the 802.11 radio.
 - network association status, including the SSID and MAC address of the access point.
 - security configuration.
 - radio transmit power and signal strength information.
- 2** Tap the **Scan** tab to view a list of available 802.11 networks. The list includes the signal strength, channel, and MAC address for each network.
 - Tap **Scan** to refresh the screen.
 - 3** Tap the **Supp** tab to view radio supplicant information, including a list of supplicant events and authentication status.
 - To verify the settings for the currently active security profile, tap **Configure Profile**. Intermec Settings launches for you to configure 802.11 Radio settings.
 - To try reconnecting to the network, tap **Reconnect**.
 - To delete the events in the list, tap **Clear Events**.
 - 4** Tap the **Ping** tab to run a ping test to the host.
 - a** In the **Host** field, enter the IP address of the host.
 - b** From the **Repetitions** list, choose the number of times the computer will ping the host.

- c** Tap **Ping**. The graph shows the amount of time it takes for the host to return the ping. Tap **List** to see this information in a list format.

- 5** Tap the **RSSI** tab to view the received signal strength of the host signal.
The information box includes the current signal strength, host SSID name, MAC address, data rate, and transmit power.
 - Tap **Mark** to place an arrow marker above the graph.

- 6** Tap the **Conf** tab to set up a log file that lists RSSI history.
This screen includes the 802.11 radio driver version and available radio modes.
To create a log file:
 - a** Check the **Log to File** check box.
 - b** (Optional) Change the sample period and number of samples displayed.
 - c** Tap **Log File**. The Save As screen appears.
 - d** (Optional) Change the name of the saved log file, the folder to which the file will be saved, the content type (log or text), and the location.
 - e** Tap **OK**.

Troubleshoot Reading Bar Codes

Use this section to troubleshoot problems that may prevent you from being able to read a bar code.

Problems Reading Bar Codes

Problem	Solution
You cannot see a red beam of light from the imager when you press the Scan button and aim the imager at a bar code label.	<ul style="list-style-type: none">• You may be too far away from the bar code label. Try moving closer to the bar code label and scan it again.• You may be reading the bar code label “straight on.” Change the reading angle and try again.• Move within two feet of a wall to test the effective scan of the scanner. For help scanning bar codes, see “About Bar Codes” on page 43.

Problem	Solution
When you release a Scan button or handle trigger, the Good Read light does not turn off.	The Good Read light will remain on if you configure the computer to use continuous/edge triggering. If you configure the computer for level triggering and the Good Read light remains on, there may be a problem. Press one of the Scan buttons or pull the trigger again without scanning a bar code label. If the light is still on, contact your local Intermec representative.
The scanner will not read the bar code label.	<ul style="list-style-type: none">• Aim the scanner beam to cross entire bar code label in one pass. Vary the scanning angle.• Check the quality of the bar code label, Scan a bar code label that you know will scan. Compare the two bar code labels to see if the bar code quality is too low. You may need to replace the label that you cannot scan.• Make sure the bar code symbology is enabled and configured correctly. Use Intermec Settings to check the symbologies. Expand Data Collection > Symbologies beneath devices listed (scanner, virtual wedge) to check and enable symbologies, then scan the bar code label again.• Make sure the computer application is expecting input from a bar code. You may need to type this information instead.
The scanner does not read the bar code labels quickly, or the scanning beam seems to be faint or obscured.	The scanner window may be dirty. Clean the window with a solution of ammonia and water. Wipe dry. Do not allow abrasive material to touch the window.
You scan a valid bar code label to enter data for your application. The data decoded by the scan module does not match the data encoded in the bar code label.	The computer may have decoded the bar code label in a symbology other than the label's actual symbology. Try scanning the bar code label again. Make sure you scan the entire label.

Troubleshoot Operating the Computer

Use this section to troubleshoot problems that may prevent you from being able to operate the computer.

Problems Operating the Computer

Problem	Solution
You cannot type a character on the keypad or you can only type uppercase or lowercase letters.	You may have locked a modifier key on the keypad. Press the necessary key sequence to unlock the key. For help, see “About the Keypad” on page 12.
You press the Power key and nothing happens.	<ul style="list-style-type: none"> • Make sure the backlight is on. • Make sure you have a charged battery that is installed correctly. For help, see “Charge the Battery” on page 8. • The battery may be discharged. Replace the battery with a spare charged battery, or charge the battery. • Reset the CN50. For help, see “Reset the Computer” on page 105.
You insert a microSD card and cannot find the SDMMC Disk folder on the CN50.	<ul style="list-style-type: none"> • The microSD card may not be installed correctly. Insert the microSD card as described in Steps 2 through 4 of “Insert a MicroSD Card” on page 16. • The microSD card may be damaged. Try another microSD card.
The Battery status LED is on.	<ul style="list-style-type: none"> • If the battery status LED is a steady green, the battery is more than 95% charged and computer is on a charger. • If the battery status LED is blinking red, then the battery is low. Replace or charge the battery. • If the battery status LED is a steady red, the main battery is on charge.
The computer appears to be locked up and you cannot enter data.	<ul style="list-style-type: none"> • Press the Power key to turn off the computer, then press the power key again to turn it on. • Cold boot the computer. For help, see “Cold Boot the Computer” on page 105. • Try reloading the firmware. For help, see “Update the System Software” on page 94. • If the computer does not boot or reset, contact your Intermec representative for help.

Problem	Solution
You tap the screen and nothing happens.	<ul style="list-style-type: none">Align your screen. For help, see “Align the Screen Using the Stylus” on page 25 or see “Align the Screen Using the Keypad” on page 26.Make sure the computer is not locked.

Call Product Support

If you cannot find the answer to your problem in the **Troubleshoot Your Mobile Computer** section, you can visit the Intermec technical knowledge base (Knowledge Central) at intermec.custhelp.com to review technical information or to request technical support. If you still need help after visiting Knowledge Central, you may need to call Product Support.

To talk to an Intermec Product Support representative, call:

1-800-755-5505

Before you can call Intermec Product Support, make sure you have the following information ready:

- Configuration number
- Serial number
- Operating system version
- If you are using security, know the type (Funk or Microsoft) and the full set of parameters
- Power management settings
- If you are using terminal emulation (TE), know the version and protocol. If you are not using TE, know the language your custom application was written in and the tools you used to create it.

You can find most of the information listed above in Intermec Settings. Consult your application developer for information on your custom application.

Find Your Configuration Number

To find the configuration number of your computer, look at the CN (configuration number) and SN (serial number) fields on the label inside the battery compartment.

Find Your Software and Firmware Version Numbers

- 1 Tap **Start** > **Settings** > **System** > **About**.
- 2 Tap **Packages** to find software version numbers.
- 3 Tap **Build** to find the firmware version.

Reset the Computer

You rarely need to reset the computer. If the computer does not resume after pressing the **Power** button, or if the computer or an application locks up, you may need to reset the computer. The computer uses the configuration currently saved in flash memory during the boot process. There are three ways to reset the computer:

- Warm boot the computer
- Cold boot the computer
- Clean boot the computer

Warm Boot the Computer

You may need to perform a warm boot to correct conditions where an application stops responding to the system.

- 1 Tap **Start** > **Shut Down**.

Or, scan this bar code.

The computer systematically shuts down.

- 2 Press the **Power** button to restart the computer. If the computer is connected to an external power supply, it automatically restarts.

Cold Boot the Computer

In some cases where the computer completely stops responding, it may be necessary to perform a cold boot. Because cold booting may result in data loss, use this method only if all other recovery methods have failed.

Note: Cold booting the CN50 does not guarantee that cached disk data will be saved, so transactional data may be lost during the reset. All other data, such as CN50 configuration and network settings, is preserved.

- 1 If possible, tap **Start > Shut Down**.
- 2 Remove the battery pack from the CN50 and wait 30 seconds.
- 3 Reinsert the battery pack and press the **Power** button.

Clean Boot the Computer

If the computer seems to be locked up, try warm booting and then cold booting the computer. If neither method works, use a clean boot to get the computer up and running for further troubleshooting. When you clean boot, the computer only loads files and applications that are absolutely required by the operating system. A clean boot returns the computer to an “out of the box” or factory default state, so that you can run diagnostic tests to troubleshoot the normal boot processes.

The clean boot process erases the computer memory, including all applications and data files in the object store. To preserve applications through a clean boot, store them in the Flash File Store. For more information, see “[Install Applications Using a MicroSD Card](#)” on page 93.

- 1 Remove the battery pack from the back of the CN50.
- 2 Reinsert the battery pack and press the **Power** button.

- 3 When the CN50 starts the boot process, simultaneously press **[F3]** and **[F2]** until the IPL Boot Configuration Menu appears on the screen.

```
IPL Boot Configuration Menu
-----
(1) Force Image Update: No
(2) Force Clean Boot   : No
(3) Passive KILL      : No
(0) Continue with Boot...
```

- 4 Press **[F2]** to select **Force Clean Boot** and then press **[F0]** to select **Continue with Boot**.

The CN50 executes the clean boot. This process takes a few minutes.

- 5 When prompted, tap the screen to set up the CN50.
- 6 Follow the instructions to calibrate the screen.

Clean the Computer

To keep the computer in good working order, you may need to clean the imager window, color camera window, and the touch screen. Clean the windows and the touch screen as often as needed for the environment in which you are using the computer. To clean the computer, use a solution of one part ammonia and three parts water.

There are no user-serviceable parts inside the computer. Opening the computer will void the warranty and may cause damage to the internal components.

- 1 Press the **Power** button to suspend the CN50.
- 2 Dip a clean cloth towel in the ammonia solution and wring out the excess.
- 3 Wipe off the imager window, camera lens, and flash area. Do not allow any abrasive material to touch these surfaces.
- 4 Wipe dry.

A

Specifications and Default Settings

Physical and Environmental Specifications

CN50 Physical Dimensions

Length	15.4 cm (6.05 in)
Width	7.4 cm (2.93 in)
Height	2.8 cm (1.09 in)
Weight	310 g (10.9 oz)

Environmental Specifications

Operating temperature	-10 °C to 50 °C (14 °F to 122 °F)
Storage temperature	-20 °C to 60 °C (-4 °F to 140 °F)
Recharge temperature	0 °C to 45 °C (32 °F to 113 °F)
Humidity	5% to 95% non-condensing
Environmental rating	IP54 compliant

Power and Electrical Specifications

Battery type	Rechargeable Lithium-ion (Li-ion) battery
Battery capacity	3900 mAh (14.4 Wh)
Electrical rating	4,65 V, 3 A

Operating System

Microsoft Windows Embedded Handheld 6.5.x

Touch Screen Specifications

Transflective TFT; QVGA color with touch panel; 240 x 320 pixels; 8.9 cm (3.5 in) diagonal active area; 5-level LED backlight control with settings.

Keypad Options

- Numeric keypad
- Alphanumeric keypad (QWERTY)

Bar Code Symbolologies

The EA21 and EA11 imager support these bar code symbolologies:

Australia Post	GS1 DataBar Omni-Directional
Aztec	Infomail
BPO	Interleaved 2 of 5
Canada Post	Japan Post
China Post	KoreanPost
Codabar	Matrix 2 of 5
Codablock A	Maxicode
Codablock F	Micro PDF417
Code 11	MSI
Code 39	PDF417

CN50 Docking Connector Specifications

The CN50 has an array of six pin surface contacts that provide USB “On the Go” (OTG) connectivity and charge power.

CN50 Docking Connector Specification

Pin Number	Signal Name	Description
1	VEXT	Computer power (4.6 V @ 1.5 A)
2	OTG_ID	Identification pin
3	OTG_VBUS	VBUS (5V @ 100 mA max)
4	OTG_USB_D-	USB data signal
5	OTG_USB_D+	USB data signal
6	GND	Ground (power return)

CN50 Imager Reading Distances

Typical reading distances are done in an office environment using office lights (4 lux). Minimum distances are measured in the dark (0 lux). Both reading distances are provided in respective scan engine integration guides. Contact your local Intermec representative for more information.

Below are the typical and minimum standard reading distances for the CN50 built with an EA21 or EA11 imager. When correctly mounted, and exit window reduces reading distances by about 4% for all scan engines.

Note: Minimum distances depend on the length of the bar code.

EA21 Area Imager Minimum Reading Distances

Minimum distances are measured in the dark (0 lux).

EA21 Minimum Reading Distances

Symbology	Density	Minimum Distance	Maximum Distance
Code 39	0.15 mm (6.0 mil)	12.0 cm (4.7 in)	18.0 cm (7.1 in)
	0.25 mm (10.0 mil)	5.0 cm (2.0 in)	30.0 cm (11.8 in)
	0.5 mm (20.0 mil)	5.0 cm (2.0 in)	60 cm (23.6 in)
	1.0 mm (40.0 mil)	9.0 cm (3.5 in)	95 cm (37.4 in)
UPC/EAN 100%	0.33 mm (13.0 mil)	5 cm (2 in)	38.0 cm (15.0 in)
Data Matrix	0.25 mm (10.0 mil)	12 cm (4.7 in)	22 cm (8.7 in)
	0.38 mm (15.0 mil)	8.0 cm (3.15 in)	34 cm (13.4 in)

Appendix A – Specifications and Default Settings

Symbology	Density	Minimum Distance	Maximum Distance
PDF417	0.25 mm (10 mil)	7 cm (2.75 in)	28 cm (11.0 in)
	0.38 mm (15 mil)	7 cm (2.75 in)	40 cm (15.75 in)

EA21 Area Imager Typical Reading Distances

Typical distances are measured in an office environment (250 lux).

EA21 Typical Reading Distances

Symbology	Density	Minimum Distance	Maximum Distance
Code 39	0.15 mm (6.0 mil)	12.0 cm (4.7 in)	18.0 cm (7.1 in)
	0.25 mm (10.0 mil)	5.0 cm (2.0 in)	30.0 cm (11.8 in)
	0.5 mm (20.0 mil)	5.0 cm (2.0 in)	60 cm (23.6 in)
	1.0 mm (40.0 mil)	9.0 cm (3.5 in)	95 cm (37.4 in)
UPC/EAN 100%	0.33 mm (13.0 mil)	5 cm (2 in)	41.0 cm (16.1 in)
Data Matrix	0.25 mm (10.0 mil)	12 cm (4.7 in)	22 cm (8.7 in)
	0.38 mm (15.0 mil)	8.0 cm (3.15 in)	35 cm (13.8 in)
PDF417	0.25 mm (10 mil)	7 cm (2.75 in)	29 cm (11.4 in)
	0.38 mm (15 mil)	7 cm (2.75 in)	44 cm (17.3 in)

EA11 Area Imager Minimum Reading Distances

Minimum distances are measured in the dark (0 lux).

EA11 Minimum Reading Distances

Symbology	Density	Minimum Distance	Maximum Distance
Code 39	0.125 mm (5 mil)	7.26 cm (2.86 in)	12.09 cm (4.76 in)
	0.20 mm (8 mil)	3.96 cm (1.56 in)	20.98 cm (8.26 in)
	0.25 mm (10 mil)	3.45 cm (1.36 in)	25.04 cm (9.86 in)
	0.50 mm (20 mil)	4.98 cm (1.96 in)	40.28 cm (15.86 in)
UPC/EAN	0.33 mm (13 mils)	4.98 cm (1.96 in)	29.62 cm (11.66 in)
Data Matrix	0.191 mm (7.5 mils)	3.71 cm (2.46 in)	16.41 cm (6.46 in)
	0.254 mm (10 mils)	5.98 cm (2.35 in)	20.73 cm (8.16 in)
	0.381 mm (15 mils)	*	27.58 cm (10.86 in)

Symbology	Density	Minimum Distance	Maximum Distance
PDF417	0.168 mm (6.6 mils)	6.25 cm (2.46 in)	13.87 cm (5.46 in)
	0.254 mm (10 mils)	4.47 cm (1.76 in)	21.74 cm (8.56 in)
	0.381 mm (15 mils)	4.98 cm (1.96 in)	33.43 cm (13.16 in)

EA11 Area Imager Typical Reading Distances

Typical distances are measured in an office environment (250 lux).

EA11 Typical Reading Distances

Symbology	Density	Minimum Distance	Maximum Distance
Code 39	0.125 mm (5 mil)	7.2 cm (2.8 in)	13.1 cm (5.1 in)
	0.20 mm (8 mil)	3.8 cm (1.5 in)	22.5 cm (8.8 in)
	0.25 mm (10 mil)	3.4 cm (1.3 in)	27 cm (10.5 in)
	0.50 mm (20 mil)	5 cm (2 in)	44 cm (17.2 in)
	1 mm (40 mil)	8 cm (3.1 in)	83 cm (32.4 in)
UPC/EAN	0.33 mm (13 mils)	5 cm (2 in)	32 cm (12.5 in)
Data Matrix	0.191 mm (7.5 mils)	6.3 cm (2.5 in)	17.3 cm (6.7 in)
	0.254 mm (10 mils)	4.8 cm (1.9 in)	22 cm (8.6 in)
	0.381 mm (15 mils)	*	29 cm (11.3 in)
PDF417	0.168 mm (6.6 mils)	6.25 cm (2.46 in)	15.4 cm (6 in)
	0.254 mm (10 mils)	4.5 cm (1.8 in)	23 cm (9 in)
	0.381 mm (15 mils)	4 cm (1.6 in)	37 cm (14.4 in)

Default Configuration

The following tables list the default values of the configuration commands supported on the CN50. If you restore to factory default settings, the CN50 uses these values.

The commands are grouped by function and reflect the organization of Intermec Settings. You can configure your CN50 with Intermec Settings from the SmartSystems Foundation console. For detailed information on most of the commands, see the *Intermec Settings Command Reference Manual*.

Data Collection Settings

Use data collection settings to configure the imager and to configure the bar codes that you want the imager to be able to read.

Keypads and Keystrokes

Standard Characters

Use the following tables to learn how to enter standard and other available characters and functions with the keypad. If there is no sequence of keystrokes for a particular character or function, it is only available through the soft input panel (SIP), which can be accessed by tapping the keyboard icon on the touch screen.

Alphanumeric Characters

Character	Numeric Keypad	QWERTY Keypad
a	2	A
b	2 2	B
c	2 2 2	C
d	3	D
e	3 3	E
f	3 3 3	F
g	4	G
h	4 4	H
i	4 4 4	I
j	5	J

C

Imager Configuration Bar Codes

You can use the bar codes to quickly configure the CN50 imager. These bar codes allow you to enable or disable symbologies, reset to factory defaults, and set predefined imager modes.

Basic Configuration Bar Codes

If you need to create a bar code for a specific setup, please download a free copy of EasySet from the CN50 page on the Intermec website at www.intermec.com.

Command	Bar Code
Disable all symbologies	
Reset to Factory Defaults	
Postamble with Carriage Return and Line Feed	
Shut down and Reboot	

Imager Predefined Modes

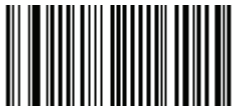

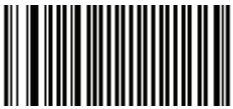

Command	Bar Code
1D codes only	
Standard 1D and 2D codes	
1D and 2D codes bright environment
