video

## Screen Material:

- CineWhite™-Multi-layer PVC (Polyvinyl chloride) with texture and surface coating, Gain: 1.1
- WraithVeil: Textured PVC with surface coating, Gain 2.2
- View Angle: 180° (90° ±LR).
- Mildew Resistant
- Surface can be cleaned with (water) moist cotton cloth

## Design and Assembly:

- Corner pull-tabs make installation easier
- Single-piece frame system unfolds effortlessly
- Detachable T-legs included
- Assembles in minutes with no tools required

## Portability:

- Light-weight aluminum square tube construction
- Soft-padded carrying bag stores entire product for portability
- Setup and Takedown is simple and quick

## Quality and Reliability:

- Stakes, rope, and support rings included for additional support and stability
- Black masking borders enhance picture contrast
- Standard 2-year parts and labor warranty
- 3-year warranty for ENR-G (Educational, Non-profit, Religious or Government/Military) - US only

# **Yard Master 2 Series**

## Indoor/Outdoor Portable Projection Screen

### **User's Guide**

Thank you for choosing the *Yard Master 2* portable projection screen! Please read through this user guide before utilizing the screen. Correct usage and maintenance will ensure a long product life

#### **Care & Use Instructions**

- ◆ Please be sure to distinguish between the front and back of the screen fabric when setting up the projection screen. CineWhite (front projection) has a black backing and WraithVeil (rear projection) is labeled front, back.
- ◆ Dust, dirt and scratches on the projection surface will affect the picture quality, please take note of the points below to prevent that from occurring:
  1. Do not touch the projection surface with your hands
  2. Do not write or draw on the projection surface
  3. Do not use fingers or sharp objects to point on the projection surface; this will damage the screen material.
  4. Use a soft-damp cloth to clean the projection surface; do not use chemical cleaning agents or alcohol.
  5. Use clean water when dampening the cleaning cloth and do not rub against the material to clean it.
- ◆ After using the screen, disassemble it and store it in the carrying bag provided.
- ◆ To avoid damage and injury, the screen should only be operated by adults.

#### **Product Description**

**Design:** The aluminum frame is designed to be light weight and easily operated making it easy to carry, assemble and disassemble.

**Screen Fabric:** The screen fabric is attached to the rectangular frame and held in place by several press studs, which ensure an evenly stretched and flat surface. The CineWhite (front projection) and WraithVeil (rear projection) screen materials are durable and can be folded many times without causing damage or distortion to the surface.

Note: The parts list above is subject to change without notice.

### Correct usage of the projection screen will ensure better viewing results.

For front projection, assemble and view the screen as indicated in Fig.1.

For rear projection, assemble and view the screen as indicated in Fig.2.

### Frame Assembly and Screen Material Attachment

1. Take the *folding frame (A)* out of the *carrying bag (H)* and place it on a flat surface. Unfold the longer sections first as shown in Fig.3-4.

2. Unfold the frame until the latch on the hinge "clicks" into place. Repeat the procedure for the shorter sections.

(Fig. 5-6)

3. Make sure all 4 corners of the frame are at a 90° angle and the hinged support bar is straight and not bending. (Fig. 7-9)

4. Insert the frame **legs (B)** into the openings located at the left and right bottom sides of the **folding frame (A)**. Secure them by fastening the **knob screw (E)** into the adjacent hole. Next, screw the **eyebolts (F)** into the openings located at the top of the frame (Fig.10).

5. Take the **screen material (D)** out of the **screen material bag (C)** and align the corners of the screen material with the inside corners of the frame. Unfold as shown in the diagram (Fig.11-12).

6. Once the **screen material (D)** is fully extended, secure the material by snapping the buttons onto the frame studs as shown in Fig. 13-15. Fasten the buttons in the following order AB→CD→EF→GH.

7. Tie 4 pieces of **rope (2 on the left and 2 on the right)** to the **eyebolts (F)** that are located at the top of the frame. Next, lift the screen up while simultaneously opening the frame legs. Two people are needed for this step. Fig.16-17

8. To secure the frame, place a **stake (I)** into each hole located on the frame footing, and hammer it into the ground. Finally, tie the 4 **ropes (G)** to the stakes to prevent the screen from tilting or falling over. As shown in fig.18.

Fig.18

## Screen Disassembly

1. Remove **ropes (G) and stakes (I)** from the ground.
2. Unlatch the hinged support bars on front side of each leg so that it is bent and fold that half of the legs up for the next step.
3. Slowly lower the screen to the ground (towards the closed legs). Two people are needed for this step.

4. Unlatch the hinged support bars and fold down other half of legs.
5. Loosen and remove the ropes, **knob screws (E)** and **eyebolts (F)** from each leg.

6. Remove the frame **legs (B)** from the **folding frame (A)**.
7. Detach the **screen material (D)** from the **folding frame (A)** by carefully unsnapping each button as shown.

8. Fold **screen material (D)** in half, folding the bottom of the screen towards the top. Then, fold in half again in the same way. Lastly, fold the material into thirds to condense the length, see Fig. 19 – 21.

\*If you prefer to roll the material, instead of folding into thirds, roll from one end to the other after folding in half twice.

Fig. 19

Fig. 20

Fig. 21

9. Unlatch the hinged support bars in each corner of the *folding frame (A)*.

10. Press in the silver locking buttons, near the folding joints, and slowly gather the sides of the folding frame

11. Again, press in the silver locking buttons. Then, pick up one end of the folding frame, and walk it to the other end, folding the longer sections into thirds.

12. Store the screen in the provided *carrying bag (h)*. Be sure to place folding frame, legs, and smaller parts into the carrying bag first and place the material on top to keep material from creasing or tearing.

The *WraithVeil Dual* is a 2-directional flexible vinyl projection screen material. It is designed to accommodate either front or rear projection. This versatile material eliminates the need to swap out the projection material to accommodate a front or rear projector array. It offers a 150° wide viewing angle and color balance for a variety of presentations.

The *WraithVeil Dual* performs best under controlled room lighting, but is capable of providing excellent performance with mild levels of ambient light when using a high lumens standard or ultra/short-throw projector.

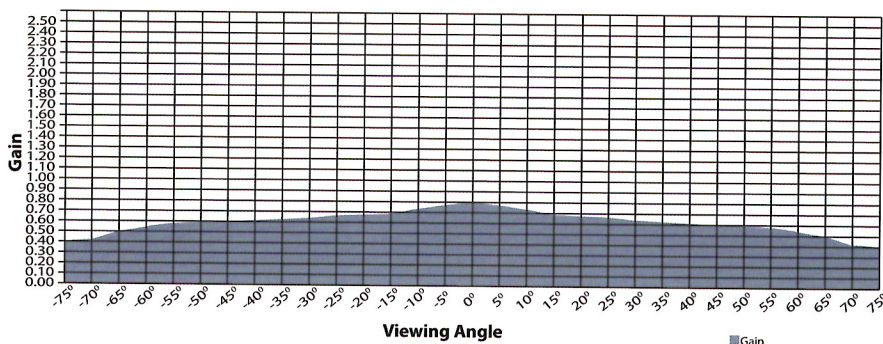

### Screen Material

- Gain: 0.8; Viewing Angle: 150° (75°LR)
- 2-Directional Front/Rear Projection
- Provides exceptional color balance and high resolution
- Broad viewing cone for edge blending applications
- Compatible with ultra, short and standard throw projectors
- 4K Ultra HD, HDR, and Active 3D Ready
- Surface cleaned with mild soap, water and a soft cloth
- Flexible PVC allows proper tension for uniform flatness
- Mildew Resistant

Elite Screen series:  
Yard Master 2 Dual

On-axis 0° Gain: 0.8  
Viewing Cone: 150°

## Elite Screens Europe Projection Screen Materials Chart

Screen Material Name	MaxWhite®	MaxWhite® Fiberglass	CineWhite®	WraithVeil®	WraithVeil® Dual	CLR®
Picture						
Description	MaxWhite® is the most versatile screen surface for front projection presentations. This material provides a wide viewing angle with perfect diffusion uniformity while delivering radiant images and color reproduction	MaxWhite® FG is fiberglass backed for added stiffness which provides the strong durability and is tearproof. This material has uniform diffusion, excellent color reproduction and black & white contrast.	CineWhite® has a broad light dispersion through diffusion uniformity. It enhances black & white levels while colors remain neutral. Perfectly flat projection material for the most demanding applications.	WraithVeil® is our rear projection screen material. It has a high gain performance for applications with high levels of ambient light. Its special surface coating enhances color reproduction.	The WraithVeil® Dual is a front/rear projection material designed to accommodate both projection methods. This 2-in-1 material eliminates the need to swap out the viewing surface which makes this a very versatile product.	CLR® is a ceiling light-rejecting front projection material designed specifically for tabletop-mounted ultra-short-throw projectors. The CLR® features a multilayer optical lens structure that absorbs light from above while providing a clear image. This allows the picture to be free from washing out the projected image.

Screen Material Name	CineGrey 3D®	CineGrey 5D®	DayWalker DW3	AcousticPro 1080P3	AcousticPro UHD
<b>Picture</b>					
<b>Description</b>	The CineGrey 3D® is a reference quality front projection screen material formulated for environments with minimal control over lighting. It was designed to enhance picture brightness, produce accurate color fidelity, and improve contrast levels.	The CineGrey 5D® is a front projection material designed to reject ambient light while maintaining superb picture quality. It's an ideal fit for rooms that have little or no control over incidental light and allows projector to reflect more light towards the viewer.	The DayWalker DW3 is a reference quality front projection screen material formulated for environments with minimal control over lighting. It was designed to enhance picture brightness, produce accurate color fidelity, and improve contrast levels.	The AcousticPro 1080P3 is the ultimate acoustically sound transparent front projection material. The tight angular weave eliminates the moire effect while presenting warm neutral colors. The AcousticPro 1080P3 allows speaker placement behind while allowing an exceptional acoustically transparent performance.	The AcousticPro UHD is a moiré-free acoustically transparent front projection screen material. The dense synthetic weave is compatible with Ultra-High Definition/4K resolutions. The AcousticPro UHD design maximizes sound penetration with minimal attenuation without compromising picture quality.
